

# The Complete Book on Biotechnology Based Bulk Drugs

**Author:** NPCS Board of Consultants & Engineers

**Format:** Paperback

**ISBN:** 9788190439879

**Code:** NI194

**Pages:** 488

**Price:** Rs. 1,050.00 **US\$** 125.00

**Publisher:** NIIR PROJECT CONSULTANCY SERVICES

Usually ships within **5** days

Biotechnology has played an essential role in the development of the healthcare chemical industries. The range of product includes diagnostic, prophylactic and therapeutic agents. The discovery of a potentially active compound starts a sequence of exhaustive chemical and biological testing that may culminate in manufacture of the agent or an improved analog. The role of biotechnology in this complex path to regulatory approval and marketing is diverse. Biotechnology is a field of applied biology that involves the use of living organisms and bioprocesses in engineering, technology, medicine and other fields requiring bio products. Biotechnology also utilizes these products for manufacturing purpose. Some of the examples of drugs produced through biotechnology are penicillin, lincomycin, streptomycin, tylosin, peptide antibiotics, cephalosporins, etc. Modern use of similar terms includes genetic engineering as well as cell and tissue culture technologies. Biotechnology draws on the pure biological sciences and in many instances is also dependent on knowledge and methods from outside the sphere of biology. Conversely, modern biological sciences are intimately entwined and dependent on the methods developed through biotechnology and what is commonly thought of as the life sciences industry. The development of biotechnology is taking place in almost all fields of human life. The recent advances in the field of basic genetics have opened up new vistas, potentials and possibilities.

Some of the fundamentals of the book are the pharmaceutical industries, marketing strategy, common features in the evolution of products and processes, process technology fermentation, product recovery, new trends in biotechnology, penicillins, biosynthesis and regulation of thienamycin, olivanic acids and epithienamycins, aminoglycoside antibiotics, streptidine and deoxystreptomycin, streptomycin, neomycin, paromomycin, ribostamycin and butirosin gentamicin, micromycin and sisomicin, tylosin, peptide antibiotics, current applications of peptides, blasticidin S: an agricultural antibiotic bleomycin and bestatin: peptides used in anticancer therapy etc.

The present book contains process of biotechnology based bulk drugs like penicillin, B lactam antibiotics, aminoglycoside antibiotics, peptide antibiotics, anti cancer agents, lincomycin etc. This is very resourceful book for entrepreneurs, technocrats, research scholars, libraries etc.

# Contents

## CHAPTER 1

### INTRODUCTION

The Pharmaceutical Industries

Marketing Strategy

Common Features in the Evolution of Products and Processes

Process Technology

Fermentation

Product Recovery

New Trends in Biotechnology

## CHAPTER 2

### PENICILLINS

Historical Perspective History

Biosynthetic Penicillins

Process Overview

Fermentation Technology

The Culture: Strain Development

Mutation

Selection

Genetics

Fermentation Process : Flow Sheet

Facilities

Inoculum Development

Fermentation Stage: Medium

Process Control

Physiological Variables and Their Effect on Product Formation

Duration of the Fermentation

Recovery of Penicillin

Carbon Process ( Obsolete)

Solvent Extraction Process (Industry Standard)

Process Overview

Filtration

Solvent Extraction

Carbon Treatment

Further Extraction

Crystallization

Drying

Further Processing

Penicillin Acid Process (State of the Art)

Semisynthetic Penicillins

6-Aminopenicillanic Acid

Enzymic Cleavage of Penicillins to Yield 6-Aminopenicillanic Acid

Chemical Preparation of 6-Aminopenicillanic Acid

Synthesis of Clinically Useful Penicillins and Closely Related Congeners

Automation

Process Economics

Costs

## CHAPTER 3

### NOVEL $\beta$ -LACTAM ANTIBIOTICS

Thienamycin  
Discovery  
Chemistry  
Pharmacological Activity  
Chemical Synthesis  
Biosynthesis and Regulation of Thienamycin  
Biosynthesis  
Regulation  
Classical Fermentation Process  
Introduction  
Seed Stages  
Production Stage  
Fermentation Process Development  
Strain Improvement  
Fed-Batch Techniques  
Synthetic Media  
Novel Fermentation Processes  
Ultrafiltration Coupled Fermenter  
Immobilized Cells  
Thienamycin Purification  
Future Prospects  
Market Projections  
Clavulanic Acid  
Introduction  
Production  
Market  
Olivanic Acids and Epithienamycins  
Nocardicins  
Introduction  
Production of Nocardicin A  
Market Projections  
Monobactams

## CHAPTER 4

### AMINOGLYCOSIDE ANTIBIOTICS

Streptidine and Deoxystreptamine

Streptomycin

Neomycin, Paromomycin, Ribostamycin and Butirosin

Gentamicin, Micronomicin and Sisomicin

Fortamine and Fortimicins

Mutasynthesis

A-Factor

Metabolic Grid

Manufacture

Fermentation

Microorganisms

Equipment

Inoculum Development

Media

Procedures

Isolation

Strain Improvement

## CHAPTER 5

### TYLOSIN

Production Technology

Structure of Tylosin and Related Compounds

Biosynthetic Pathway

Growth of Producer Microorganisms

Product Recovery and Purification

Product Development

Development in the Genetic Improvement of Producing Strains

Developments in Fermentation Technology

## CHAPTER 6

### PEPTIDE ANTIBIOTICS

Current Applications of Peptides

Blasticidin S : an Agricultural Antibiotic

Bleomycin and Bestatin: Peptides used in Anticancer Therapy

Cyclosporin: an Immunosuppressor

Structural Types of Peptides

Biosynthesis of Peptide Antibiotics

Ribosomal and Nonribosomal Mechanisms

Reactions Involved in Enzymatic Peptide Formation

Carboxyl Activation

Peptide Bond Formation

Modification Reactions

Production of Peptides

Screening Methods

Biotechnological Production Methods

Improvements and Modification Procedures

Compilation of Peptides

Abbreviations Used in the Table

Alternative Names and Synonyms Compounds Listed in the Table

Appendix

## CHAPTER 7

### STREPTOMYCIN AND COMMERCIALY IMPORTANT AMINOGLYCOSIDE ANTIBIOTICS

Generalities on Aminoglycoside Antibiotics

Historical Background

Structure of Different Classes of Aminoglycoside Antibiotics

Microbiological Activity and Clinical use

Mode of Action

Problems with Toxicity and Bacterial Resistance

Toxicity

Bacterial Resistance

Streptomycin

Generalities

Physicochemical Properties

Assay and Identification Methods

Assay Methods

Identification Methods

Biosynthesis

Production Technology

Fermentation

Product Recovery

Other Major Aminoglycoside Antibiotics  
Screening and Genetic Engineering of Strains for New Aminoglycosides  
Screening of new strains  
Use of Idiopathic Mutants  
Structural Modification of Known Aminoglycosides  
Hemisynthesis  
Bioconversion  
Chemical Synthesis of New Aminoglycosides  
Streptothricins, Aminoglycoside-like Antibiotics  
Structure  
Physicochemical and Biological Properties  
Production by Fermentation and Isolation  
Uses  
Marketing Prospects

## CHAPTER 8

### CEPHALOSPORINS

Mode of Action of Cephalosporins  
Structure and Biosynthesis of Bacterial Cell Wall  
Sensitivity and Resistance  
Structure/Activity Relationships  
Cephalosporin Market  
Biosynthesis of Cephalosporins  
Biosynthesis Pathway  
Regulation of Cephalosporin Biosynthesis  
 $\beta$ -Lactamase Inhibitors  
Valine  
Cysteine  
Effect of Oxygen Tension  
Catabolite Repression  
Specific Growth Rate  
Fermentation Process  
The Fermenter-Its Design and Instrumentation  
Fermentation Microbiology  
Production Kinetics  
Strain Development  
Fermentation Development  
Alternative Process-DAC Process  
Recovery Process  
Purification of Cephalosporin C  
Cleavage of Cephalosporin C to 7-ACA

## CHAPTER 9

### COMMERCIAL PRODUCTION OF CEPHAMYCIN ANTIBIOTICS

Cephamicin Product Description  
Discovery  
Mode of Action  
Cefoxitin  
Physicochemical Characteristics  
Cephamicin C Assay Techniques  
Fermentation Microbiology  
Introduction  
Metabolic Origins

Carbon Metabolism  
Nitrogen Metabolism  
Sulfur Metabolism  
Phosphate Metabolism  
Cephamycin Production Technology  
Inoculum Development Stage  
Antibiotic Production Stage  
Isolation and Purification Stage  
Conclusions and Implications

## CHAPTER - 10

### LINCOMYCIN

Discovery  
Chemistry  
Spectrum  
Mode of Action  
Lincomycin Assays for Fermentation Development and Production  
Production Technology  
Lincomycin Biosynthesis  
Fermentation  
Lincomycin Production by Other Actinomyces Species  
Fermentation Power Requirements  
Isolation  
Chemical Derivatives of Lincomycin  
Commercial Markets  
Current Manufacturers  
Product Outlook

## CHAPTER 11

### PHARMACOLOGICALLY ACTIVE AND RELATED MARINE MICROBIAL PRODUCTS

Pharmacologically Active Compounds From Marine Microorganisms  
Products From the Culture of Microalgae in Coastal Ponds  
Agricultural Applications  
Conclusions

## CHAPTER - 12

### ANTICANCER-AGENTS

The Drug Development Process  
Market Information  
Containment Technology for Cytotoxic Agents  
Containment of Process Equipment  
Personnel Protection  
Decontamination of Waste Streams  
Microbial Process Examples  
Fermentation Processes for Production of Anthracyclines  
Strain Improvement  
Batch Fermentation Processes  
Isolation and Purification  
Fermentation Processes for Production of Nucleosides  
Strain Improvement  
Batch Production Process  
Therapeutic Enzymes  
Batch and Continuous Fermentation Processes

Isolation and Purification  
Examples of Products of Mammalian Cells in Culture  
Interferon Production  
Fibroblast Processes (HuIFN- $\beta$ )  
Leukocyte Processes (HuIFN- $\alpha$ )  
Lymphoblastoid Processes (Hu Ly, IFN)  
Immune Interferon Processes (HuIFN- $\gamma$ )  
Future Technologies: Lymphokines and Monoclonal Antibodies  
Summary  
Appendix

## CHAPTER 13

### SIDEROPHORES

The Need for Iron-Solubilizing Agents  
The Role of Siderophores  
Uptake and Release of Iron from the Siderophore Complex  
Production of Siderophores  
Conditions for Siderophore Production  
Extraction  
Adsorption  
Ion-exchange Chromatography  
Restricted Growth  
Protein Binding of Contaminant Iron  
Range of Molecular Structures  
Hydroxamates  
Catecholates (sometimes referred to as phenolates)  
Siderophores with Antibiotic Activity  
Sideromycins  
Interference with Iron Uptake  
Siderophore Analogues  
Sideromycins  
Extraction and Purification of Siderophores  
Mycobactin  
Enterochelin  
Ferrichrome  
Commercial Production of Desferrioxamine B (Desferal)  
Uses of Siderophores  
Iron Metabolism in the Body  
Iron Poisoning and Chelation Therapy  
Haemochromatosis and Chelation Therapy  
Chelation Therapy  
Other Medical Application for Siderophores  
Applications for Siderophores Outside Medicine  
Future Trends

## CHAPTER 14

### STEROID FERMENTATIONS

Bioconversions of Practical Importance  
Bioconversions of Limited or Potential Practical Importance  
Progesterone Side Chain Cleavage  
Ring A Aromatization  
17 and 21-Hydroxylations

Alternative Bioconversion Methods  
Sterol Degradation  
Steroid Solubility  
Methods of Steroid Addition  
Steroid Conversion in Organic Solvents  
Future Trends in Steroid Bioconversions  
Recovery of Steroids  
Split Process  
Whole-beer Process  
Cake-extraction Process  
Products of Commercial Importance  
Summary

## CHAPTER 15

### RODUCTS FROM RECOMBINANT DNA

Production Technology  
Methods for Cloning and Expression  
Range and Relative Advantages of Host Microorganisms  
Stability of Strains and Plasmids  
Product Recovery and Purification  
Commercial Markets  
Markets for Recombinant Products

## About NIIR

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.
