The Complete Technology Book on Steel and Steel Products (Fasteners, Seamless Tubes, Casting, Rolling of Flat Products & others)

Author:- NPCS Board of Consultants & Engineers Format: paperback Code: NI206 Pages: 576 Price: Rs.1625US\$ 150 Publisher: NIIR PROJECT CONSULTANCY SERVICES Usually ships within 5 days

Iron and steel have played a leading role in the development of human civilization and their techniques. Together with its derivative, steel, iron has no real rival in its particular fields of application and has become a synonym of progress, being an essential element in mankind greatest technological achievements. It was at the origin of the industrial and scientific revolutions and at the heart of all the great discoveries which have marked the history of humanity from the manufacture of high quality swords in ancient times to today architectural wonders. Steel is an alloy that consists mostly of iron and has carbon content between 0.2% and 2.1% by weight, depending on the grade. Carbon is the most common alloying material for iron, but various other alloying elements are used, such as manganese, chromium, vanadium, and tungsten. Rolling is a metal forming process in which metal stock is passed through a pair of rolls. Rolling is classified according to the temperature of the metal rolled. Steelmaking is the second step in producing steel from iron ore. Processing of steel results in special steel product with required properties, for example; vacuum treated steel for forging ingots; pre strengthened stress relieved elongated steel, metallurgical addition product, forging powder alloy steels, etc. Fasteners are used to join and hold two or more pieces of metal either temporarily or more pieces of metal either temporarily or permanently. Some of the most common are bolts, screws, nuts, rivets and pins. Packaging steels differ from other sheet products particularly in terms of their thickness, mechanical properties and coatings, together with their aptitude to satisfy specific industrial and marketing requirements related to high production rates, design factors etc. Small gage welded tubes have an extremely wide range of applications, including metallic roof frames, mechanical construction in public work and industrial engineering sector, agricultural machinery, fluid distribution circuits, piston, etc. India is among the top producers of all forms of steel in the world. Easy availability of low cost manpower and presence of abundant reserves make India competitive in the global setup. The steel industry in India has witnessed an increase in demand due to expanding oil and gas sector, huge spending on infrastructural facilities coupled with growth in housing, consumer durables and auto sectors. This book basically deals with structural changes in steel during hot rolling, structural changes during reheating, kinds of grain restoration process, dynamic restoration process, static restoration process, effect of initial grain, size of static re crystallization, effects of temperature and micro alloying, fundamental principles of the metal rolling process, preparing and heating the initial materials, preparations for rolling heating before rolling operations, bolt and nut manufacturing technology, casting of steel for flat products etc.

The present book covers different important aspects of steel processing with the casting method of steel for flat products, rolling of rails, wheels and rings, rolling of different steel products, production of fasteners, welded pipes, steel products for the building trade and many more. The book is very useful for everybody who wants the thorough study on steel and steel products or wants to diversify in to this field.

1. Structural Changes in Steel during Hot Rolling Structural Changes during Reheating Kinds of Grain Restoration Process **Dynamic Restoration Process** Static Restoration Process Effect of Initial Grain Size of Static Recrystallization Effects of Temperature and Microalloying Effect of Amount of Deformation Factors Affecting Critical Reduction for Recrystallization Grain Growth after Deformation Structural Changes in Steel during Cooling Effect of Steel Structure on Flow Stress 2. Fundamental Principles of the Metal Rolling Process 3. Steels for Magnetic Applications **Electrical Steels-Metallurgy and Properties** Introduction Utilization and Property Requirements **Optimization of Magnetic Properties** Type of Electrical Steel Classification **Steel Grades** Market Segmentation Conclusions 4. Preparing and Heating the Initial Materials Preparations for Rolling Heating before Rolling Operations 5. Hot Seamless Tube Rolling Processes Elements of Skew Rolling Theory Tube Rolling in Plug Mill Type Seamless Tube Mills Tube Rolling in Continuous Seamless Tube Mills **Tube Rolling in Three-Roll Mills Tube Rolling in Pilger Mills** Seamless Tube Production by the Extrusion Process Seamless Tube Finishing Operations 6. Bolt and Nut Manufacturing Technology Introduction Fundamentals of Mechanically Working and Cutting Metals (a) Cold Forming (b) Hot Forging (c) Metal Cutting Manufacturing Technologies (a) Cold Forming of Bolts (b) Cold Forming of Nuts (c) Hot Forging of Bolts

(d) Hot Forging of Nuts (e) Machining of Bolts and Nuts from Hexagon Bar Steel Pre-Processing (a) Steel Making (b) Surface Treatments and Wire Drawing **Fastener Steels and Heat Treatments** (a) Alloying Elements (b) Heat Treatments **Finishing Operations** 7. Casting of Steel for Flat Products Type of Cast Products Casting of Ingot Types of Ingots Methods of Continuous Casting of Thick Slabs **Continuous Casting of Thick Slabs** Slab Width Control Continuous Casting of Thin Slabs and Strip **Requirements for Continuously Cast Steels** Oxide Inclusions in Concast Steel Formation of Oxide Phases Influence of Caster Type on Steel Quality 8. The Rolling of Rails, Wheels and Rings Introduction Early Types of Rails and their Production The Evolution for the Rail Mill Modern Rail Mills Rail Joints and their Manufacture The Forging and Rolling of Wheels **Ring Rolling** 9. Mill Automation for the Rolling of Flat Products Automation of Flying Shear Operation in a Continuous Hot-Rolling Mill Automation of Coiler Operation for Hot Strip Automation of Strip Measuring Gauges for Hot Rolling Automation of Continuous Pickle Line Operation Automation of Strip Thickness Gauges for Cold Reduction Automation of Strip Thickness Control by the Screw-Down Gear 10. General Steelmaking Processes Welding Material for Super Low Temperature Steels Refining Steel by Blowing Oxygen Beneath the Surface Cold Reduced Aluminum Stabilized Steel having High Drawability Sulfide Modification of Steel Steel Sheets having Excellent Enamelability Liquid Sintering with Titanium Alloys Liquid-Solid Alloys for Casting **Rimmed Unkilled Enamelling Steel** Producing an Enamelling Steel Sheet Deep Drawable Deoxidized Steel Alloying Steel with Highly Reactive Materials Prevention of Surface Cracking during Steel Reheating Prestrengthened Stress Relieved Elongated Steel

Vacuum Treated Steel for Forging Ingots Metallurgical Addition Product Uncropped, Unworked, Elongated Leaded Steel Casting Adding Alloys to Steel Production of Low Carbon Ferroalloys Forging Powder Alloy Steels Production of Leaded Steel Low Carbon Ferrochromium **High Explosive Fragmentation Munition** 11. Varnishing and Printing of Packaging Steels Introduction General Aspects of Organic Coatings used for Varnishing and Printing Definition Types of Organic Coating **Organic Coating Constituents** Application and Curing of Organic Coatings Application with Roller Varnishing Machines Curing Other Application Techniques **Inspection Methods** Printing and Decoration of Metallic Packaging Conclusions 12. Phase Transformation in Steel Phase Diagram **Constituents in Steels** Austenite Ferrite Graphite Cementite Eutectoid Pearlite Eutectic Ledeburite **Transformation Temperature** Phases in Hypoeutectoid Steel Phases in Eutectoid Steel Phases in Hypereutectoid Steel Phase Transformation Hysteresis Supercooling or Austenite **Bainite** Martensite Isothermal Transformation Diagram **Continuous-Cooling Transformation Diagram** 13. Optimization and Modernization of Hot Strip Mills Main Strategy in Optimization of Rolling Process Metallurgical Requirements **Energy Consumption Requirements** Yield Requirements **Product Quality Requirements** Analysis of Temperature Conditions in Hot Strip Mill Methods of Optimizing Temperature Conditions

Optimizing Operating Parameters Close Coupling of Continuous Rougher with Finishing Mill Close Coupling of a Reversing Rougher with Finishing Mill Combining a Reversing Rougher with Finishing Mill Coilbox Intermediate Steckel Mill **Reradiating Thermal Cover System** Main Objectives in Modernization of Hot Strip Mill Requirements for the Evaluation Models Evaluation of the Solutions for Mill Modernization 14. Low Carbon Constructional Alloy Steels Low Temperature High Strength Tough Steel Alloy Steel for Arctic Service High Strength Cold Rolled Steel with High Press Formability Production of High Strength Cold Rolled Steel Sheet Low Alloy Steel for Low Temperature Services **Full Continuous Annealing Process** High Strength Killed Wire Rods and Bars High Formability High Strength Steel High-Strength Cold-Workable TI Added AL Killed Steel Improving Strength and Toughness by Controlled Cooling High Strength Notch Tough Steel Hot Rolled High Strength Low Alloy Steel Preparation of Hot Rolled Niobium Structural Steel Hot Rolled Flat Steel for Cryogenic Service High Strength Structural Steel with Good Weldability 15. Hot Rolling of Plate, Sheet and Strip Types and Sizes Initial Materials and Reheating them for Rolling Hot Rolling Sheet and Plate Mills Hot Rolling Processes for Plate and Sheet in Various Types of Mills Rolling Steel Strip in a Planetary Mill Finishing of Hot-Rolled Flat Products 16. Rolling of Section Steel, Bars and Rods Types and Sizes Initial Materials and Reheating them for Rolling Section Mills Rod Mills Strip Mills Roll Pass Design for the Rolling of Rounds Roll Pass Design for the Rolling of Squares Roll Pass Design for the Rolling of Flats and Strip Roll Pass Design for the Rolling of Angles Finishing Operations on Bars and Rods 17. Modern Rolling Plant Mills for the Continuous Rolling of Wide Strip Modern Plant for the Rolling of Non-ferrous Material Copper and Copper Alloys

Nickel and Nickel Alloys Aluminium and Aluminium Alloys **18. Metal Fasteners** Machine Bolts **Cap Screws Machine Screws** Set Screws Thread-forming Screws Stove Bolts **Carriage Bolts** Stud Bolts Nuts **Castle Nuts** Jam Nuts Cap or Acorn Nuts Wing Nut Washers **Rivets** Machine Pins 19. Production of Welded Pipe Continuous Furnace Butt-Welded Pipe Manufacturing Processes Electric Resistance Welded Pipe and Tubing Production High Frequency Electric Resistance Welding in Pipe and Tubing Production Submerged-Arc Welded Pipe and Tubing Production Production of Submerged-Arc Welded Straight-Seam Pipe Production of Submerged-Arc Welded Helical-Seam Pipe Other Welded Pipe Production Methods Inert-Gas Metal-Arc Welding of Pipe Induction Welding of Pipe and Tubing 20. Sheet Forming for Packaging Applications **Drawing of Packaging Steels** Specific Aspects of Packaging Steels Characterization of Packaging Steels Parameters Affecting Drawing Behavior **Example Applications** Drawing and Wall Ironing of Packaging Steels **Preliminary Drawing** Wall Ironing Necking and Flanging Full Operture Easy-Open Can Ends Score Line Profile (Tool Geometry and Residual Thickness) Score Line Shape in the Plane of the LID **End Profiles Steel Grades** Can End Seaming Principle of Double Seaming Seaming Tools 21. Mill Automation for Pipe and Tubing Production

22. Steels for Small Gage Welded Tubes The Small Gage Welded Tube Market Manufacturing Processes Steel Products used in the Manufacture of SWT's Major Property Requirements Conditions to be Met in SWT Manufacture **Geometry Control** Principal Grades Employed 23. Steel Products for the Building Trade Statutory Requirements **Building Steels and their Coatings Steel Selection Galvanized Steels Coil Coated Steels** The New Solissime Range **Coating Selection Guide Utilization and Maintenance Precautions Additional Products** "Condensation-proof― Coatings Acoustic Insulation **Thermal Insulation** Solconfort Sandwich Sheets **Isofran Sandwich Sheets Typical Applications** Walling and Roofing **Facing Systems** Flooring Conclusions

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Startup Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes varies process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business.

Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.

NIIR PROJECT CONSULTANCY SERVICES, 106-E, Kamla Nagar, New Delhi-110007, India. Email: npcs.india@gmail.com Website: NIIR.org
