

# The Complete Technology Book on Industrial Adhesives

**Author:** NPCS Board of Consultants & Engineers

**Format:** hardcover

**Code:** NI208

**Pages:** 592

**Price:** Rs 1675 | US\$ 150

**Publisher:** NIIR PROJECT CONSULTANCY SERVICES

**Shipping:** 5 days

## About the Book

Adhesives were utilized in a sophisticated manner even in ancient times. Recent years have seen the rapid development of adhesive bonding as an economic and effective method for the fabrication of components and assemblies. The great many types of adhesives are currently in use and there is no adequate single system of classification for all products. The adhesives industry has generally employed classifications based on end use, such as metal to metal adhesives, wood adhesives, general purpose adhesives, paper and packaging adhesives etc. An adhesive or formulation is generally a mixture of several materials. The extent of mixture and the ratio usually depend upon the properties desired in the final bonded joint. The basic materials may be defined as those substances, which provide the necessary adhesive and binding properties. The type of adhesive material is easier to define and usually falls into three categories; thermosetting resins, thermoplastic resins and elastomeric resins. A thermosetting system, 100 percent reactive when in a pure state, the epoxies are very desirable and more widely used than any other chemical type. Epoxy is one of the newer types and has penetrated more fields of manufacturing operations in a shorter space of time than any of its predecessors. The many catalysts used with epoxies produce systems of variable properties. The most common are the aromatic amines and cyclic anhydrides. The phenolics or phenol formaldehyde resins are formed by the condensation reaction of phenol and formaldehyde. The phenolic resins have been used extensively in the lamination of plywood and in filament wound structures. There are two basic classes of phenolic resins resoles and novalacs, and both begin as phenol alcohols. When combined or alloyed with other adhesive systems, they become excellent structural adhesives and are widely used in this manner throughout the aerospace industry. The vinyl polymers do not stand alone as a structural adhesive, but hundreds of adhesives are formulated by the use of this class of polymer. The vinyls are important to adhesive bonding not only from the adhesive standpoint, but because the films derived from these substances are widely used as vacuum bags, slip sheets, etc. The more widely used ones are polyvinyl chloride, polyvinyl alcohol, and polyvinyl fluoride. There are numerous kinds of adhesives used in different industries; polyvinyl acetate wood adhesives, aminoresin wood adhesives, phenolic resin wood adhesives, cyanoacrylate adhesives, hot melt adhesives, water based adhesives etc. The market for adhesives is comprised of thousands of end uses. The realm of market applications expands as new end uses keep developing, driven by the need for new and innovative attachment solutions. When looking at the total market, adhesives account for about 75% of the volume consumed.

This book basically deals with adhesive properties and general characteristics, adhesive materials and properties, adhesives types, thermoplastic adhesives, thermosetting adhesives, rubber resin blends, properties of basic adhesives types, acrylics acrylic acid diesters, allyl diglycol, carbonate, animal glues, blood albumen, butadiene styrene rubbers, butyl rubber and polyisobutylene casein, cellulose derivatives, cellulose acetate, acetate butyrate cellulose, caprate cellulose, nitrate (nitrocellulose or pyroxylin), ethyl cellulose, hydroxy ethyl cellulose, methyl cellulose and sodium carboxy methyl cellulose, ceramic or refractory inorganic adhesives

cyanoacrylates, epoxy adhesives, epoxy nylon, epoxy polyamide, epoxy polysulphide, epoxy polyurethane, fish glue, furanes etc.

The present book covers the manufacturing processes of different industrial adhesives with their formulae. It is

hoped that the book can serve to new entrepreneurs, technocrats and existing units to the technology of adhesive and guide them to a useful understanding of the wide variety of adhesives which exist today.

## Contents

### 1. ADHESIVE PROPERTIES AND GENERAL CHARACTERISTICS

- Epoxies
- Phenolic Adhesives
- Nitrile Adhesives
- Vinyl Adhesives
- Neoprene
- Polyurethanes
- Silicones
- Polyesters
- Acrylics
- Rosin (Sometimes Called Colophony)
- Polysulfide Rubber Adhesives
- Ceramic Adhesives
- Cyanoacrylate Adhesives
- Polyaromatic Adhesives
- Vinyl Phenolic Adhesives
- Neoprene Phenolic Adhesives
- Epoxy-Silicone Adhesives
- Epoxy-Polysulfide Adhesives
- Epoxy-Nylon Adhesives
- Epoxy-Phenolic Adhesives
- Nitrile-Phenolic Adhesives
- Modified Epoxy Intermediate Curing Films

### 2. ADHESIVE MATERIALS AND PROPERTIES

- The Components of An Adhesive
- Adhesives Types
- Thermoplastic Adhesives
- Thermosetting Adhesives
- Rubber-Resin Blends
- Properties of Basic Adhesives Types
- Acrylics
- Acrylic Acid Diesters
- Allyl Diglycol Carbonate
- Animal Glues
- Blood Albumen
- Butadiene-styrene Rubbers
- Butyl Rubber and Polyisobutylene
- Casein
- Cellulose Derivatives
- Cellulose Acetate
- Cellulose Acetate-butyrate
- Cellulose Caprate
- Cellulose Nitrate (Nitrocellulose or Pyroxylin)
- Ethyl Cellulose
- Hydroxy Ethyl Cellulose

Methyl Cellulose and Sodium Carboxy Methyl Cellulose  
Ceramic or Refractory Inorganic Adhesives  
Cyanoacrylates  
Epoxy Adhesives  
Epoxy-Nylon  
Epoxy-Polyamide  
Epoxy-Polysulphide  
Epoxy-Polyurethane  
Fish Glue  
Furanes  
Hot-Melt Adhesives  
Inorganic Adhesives and Cements  
Sodium Silicate  
Phosphate Cements  
Basic Salts (Sorel Cements)  
Litharge Cements  
Sulphur Cements  
Hydraulic Cements  
Inorganic Polymers  
Ionomer Resins  
Isocyanates  
Isocyanate Adhesives  
Isocyanate Modified Adhesives  
Isocyanate Polyester Methane Adhesives  
Melamine Formaldehyde  
Natural Rubber  
Nitrile Rubbers  
Permanence  
Nylon Adhesives  
Solution Adhesives  
Hot-melts  
Phenolic-nylon  
Phenolic-epoxy  
Phenol Formaldehyde (Acid Catalysed)  
Phenolic Formaldehyde (Hot Setting)  
Phenolic-Neoprene  
Phenolic-Nitrile  
Phenolic-Polyamide  
Phenolic-Vinyl Butyral  
Phenolic-Vinyl Formal  
Phenoxy  
Polyamides  
Polyaromatics  
Polyimides (PI)  
Polybenzimidazoles (PBI)  
Polybenzothiazoles (PBT)  
Polyphenylenes (PP)  
Polychloroprene (Neoprene) Rubbers  
Polyesters  
Allyls  
Alkyds (or Glyptals)

Polyesters (Unsaturated)  
Polystyrene  
Polysulphide (Thiokol)  
Polyurethanes  
Polyvinyl Acetals  
Polyvinyl Acetate  
Polyvinyl Alkyl Ethers  
Polyvinyl Alcohol  
Polyvinyl Chloride  
Reclaim Rubber  
Resorcinol Formaldehyde and Phenol  
Resorcinol Formaldehyde  
Rubber Derivatives  
Chlorinated Rubber  
Cyclised Rubber  
Rubber Hydrochloride  
Silicones  
Silicone Rubber  
Epoxy-silicone  
Soy(a)bean and Vegetable Proteins  
Starch  
Thermoplastic Resins (Miscellaneous)  
Coumarone-indene  
Shellac  
Rosin (Colophony)  
Oleo-Resins (Vegetable Oils + Rosin, Phenolic or Alkyd Resins)  
Bitumen (Including Asphalt)  
Urea Formaldehyde  
Water and Solvent Based Adhesives  
Waxes

### 3. PHYSICAL TESTING OF ADHESIVES

Introduction  
Strength Properties  
Assessment of Durability and Strength  
Parameters  
Fatigue  
Creep  
Flexural Strength  
Peel Strength  
Durability  
Non-Destructive Testing  
Standard Test Methods

### 4. POLYVINYL ACETATE WOOD ADHESIVES

Introduction  
Background  
Chemistry of Polyvinyl Acetate  
A. Production of Vinyl Acetate Monomer  
B. Polymerization of Vinyl Acetate  
Formulating A Pva-Based Adhesive  
A. General Considerations  
B. Formulating and Compounding

## C. Guide Formulations

### Aspects of Application

#### A. Joint Design

#### B. Surface Preparation

#### C. Adhesive Preparation

#### D. Application

#### E. Assembly Conditions

#### F. Influence of Temperature

### Performance of Pva Adhesives

#### A. Factors Affecting Durability

#### B. Specifications

#### C. Testing

### Conclusion

## 5. AMINORESIN WOOD ADHESIVES

### Introduction

### Chemistry of Aminoresins

#### A. Urea-Formaldehyde Condensation

#### B. Melamine-Formaldehyde Condensation

#### C. Aniline-Formaldehyde Condensation

#### D. Reaction Kinetics: Urea-Formaldehyde

#### E. Reaction Kinetics : Melamine-Formaldehyde

#### F. Reaction of Methylolureas in the Presence of Cellulose

#### G. Reaction Mechanisms: Urea-Formaldehyde

#### H. Reaction Mechanisms: Melamine-Formaldehyde

#### I. Hardening

#### J. Analysis

### Chemistry and Technology of Application of Aminoresin Adhesives for Wood

#### A. General Principles of Manufacture and Application

#### B. Formulaire

#### C. Plywood and Particleboard Adhesives

#### D. Melamine Laminates

#### E. Glulam, Finger Jointing and Joinery Adhesives

#### F. Toxicity

## 6. PHENOLIC RESIN WOOD ADHESIVE

### Introduction

### Chemistry of Phenol-Formaldehyde Condensations

#### A. Reaction Mechanisms

#### B. Nature of Mechanism : Methylene and Methylene-Ether Bridges

#### C. Acid Catalysis

#### D. Alkaline Catalysis

#### E. Metallic Ions Catalysis and Orientation of the Reaction

#### F. Reaction Kinetics

#### G. Hardening

#### H. Resorcinol and Meta-Aminophenol Condensates

### Chemistry and Technology of Application of Phenolic Resin Adhesives for Wood

#### A. General Principles of Manufacture

#### B. Plywood and Particleboard Adhesives and the Factors Regulating Their Application

#### C. Properties of Phenolic Adhesives for Plywood

- D. Formulation of Plywood Glue Mixes
- E. Plywood Manufacturing Variables
- F. Wood-Related Factors
- G. General Observations on Particleboard Manufacture
- H. Dry-Out Resistance
- I. Wood Laminating and Finger Jointing Adhesives
- J. Fast Setting Adhesives for Finger Jointing
- 7. TANNIN-BASED WOOD ADHESIVES
  - Introduction
  - Chemistry of Condensed Tannins
    - A. General
    - B. Monoflavonoids
    - C. Biflavonoids
    - D. Triflavonoids and Tetraflavonoids Condensed Tannins
    - E. Methods for the Analysis of Phenolic Materials Content in Tanning Extract
  - Reactivity of Tannins as Macromolecules
    - A. Reactivity and Orientation of Electrophilic Substitutions of Flavonoids.
    - B. A- and B-Ring Reactions with Aldehydes and Their Kinetics
    - C. Metal Ions Catalysis
    - D. Hydrolysis and Acid and Alkaline Autocondensation
    - E. Sulfitation
  - Chemistry and Technology of Industrial Tannin Adhesive Formulations
    - A. General
    - B. Standardization of Industrial Tanning Extracts
    - C. Exterior-Grade Plywood Adhesives
    - D. Cold-Setting, Fast-Setting and Radio-Frequency Laminating Adhesives
    - E. Exterior-Grade Particleboard Adhesives
    - F. Corrugated Cardboard Adhesives
    - G. Generation of Resorcinol
    - H. Infrared Analysis of Resorcinol Content in Tannin-Based Adhesives
- 8. URETHANE STRUCTURAL ADHESIVE SYSTEMS
  - Introduction
  - A. Historical
  - B. Advantages and Limitations
  - Chemistry
    - A. Basic Concepts
  - Application – Meter-Mix Equipment
  - Curing, Testing and Durability
    - A. Curing
    - B. Testing and Durability
  - Health, Safety and Environmental Considerations
  - Quality Control of Urethane Adhesives
- 9. MODIFIED ACRYLIC STRUCTURAL ADHESIVES
  - Introduction
  - History
  - Performance Properties
    - A. Advantages
    - B. Disadvantages
    - C. General Performance
  - Curing Properties
  - Technology

## Handling Properties

- A. Accelerator Lacquer Method
- B. Two-Component Mix Method
- C. Two-Component, No-Mix Method

## Representative Case Histories

- A. Solar Heating Panels
- B. Ceramic Magnets
- C. Shipbuilding
- D. Sporting Goods
- E. Aircraft

## Meter, Mix, Dispense Equipment

## Present Limitations and Future Directions of Modified Acrylic Structural Adhesives

## 10. PHENOLIC ADHESIVES AND MODIFIERS

### Introduction

### Chemistry of Phenolic Resins

### Analytical Test Methods

### Phenolic Adhesives

### Phenolic Modifiers

### Phenolic Modifiers as Tackifiers

### Solvent-Based Contact Adhesives

- A. Neoprene-Phenolic Contact Adhesives
- B. Adhesive Compounding
- C. Adhesive Testing and Performance
- D. Solvent Blend

### E. Nitrile-Phenolic Contact Adhesives

### Phenolic Dispersions

### Other Uses for Phenolic Tackifiers

### Structural Adhesives

- A. Vinyl-Phenolic Structural Adhesives
- B. Nitrile-Phenolic Structural Adhesives
- C. Epoxy-Phenolic Structural Adhesives

### Summary

### Suppliers of Trade-Name Material

## 11. CYANOACRYLATE ADHESIVES

### Introduction

### Types of Cyanoacrylate Adhesives

### Mechanism of Bond Formation

### Advantages

### Limitations

### Bonding Characteristics on Various Substrates

- A. Metals
- B. Plastics
- C. Rubber
- D. Glass
- E. Wood and Porous Materials

### Dispensing Cyanoacrylates

### Requirements for Successful Use of Cyanoacrylate Adhesives

### Commercial Applications in Product Assembly

### Toxicity and Handling Precautions

- A. Toxicity

## B. Handling Precautions

Cleaning Up Excess Adhesive

How to Release Bonds

Shelf Life of Cyanoacrylates

## 12. HOT-MELT ADHESIVES

Introduction and Definition of Hot-Melt Adhesives

Advantages and Limitations of Hot-Melt Adhesives

A. Advantages

B. Limitations

Types of Hot Melts Based on the Backbone Polymer

Elementary Principles of Joint Design

Hot-Melt Adhesive Usage by Industry

Where Hot-Melt Adhesives are Used

Summary of Adhesives by Base Polymer or Use

What to do when Problems Occur while using Hot-Melt Adhesives

Safety Suggestions for using Hot-Melt Adhesives

Hot-Melt Adhesivesâ€™Forms and Shapes

Hot-Melt Adhesivesâ€™Anticipated Future Developments

Thermoplastic-Thermoset

Foamable Hot Melts

Exotic Polymers

## 13. PRESSURE-SENSITIVE ADHESIVES

Introduction

Theory

Surface Tack

Peel Adhesion

Shear Resistance

The Influence of Polymer Structure on Performance Properties

Market and Trends

A. Introduction

End Uses

Solvent-Based Pressure-Sensitive Adhesives

Water-Based Systems

Hot-Melt Pressure-Sensitive Adhesives

Radiation Curing

Coating Methods

Test Methods

## 14. WATER-BASED ADHESIVES

Introduction

Types of Water-Based Adhesives

Chemistry and Formulating of Water-Dispersed Adhesives

A. Natural-Rubber Latices

B. Synthetic-Rubber (Polymer) Latices

Postformed-Rubber (Polymer) Latices

Film Formation of Water-dispersed Adhesives

Bonding Techniques

A. Wet Bonding

B. Open-Time Bonding

C. Contact Bonding

D. Solvent Reactivation

E. Heat Reactivation

Forced Drying of Latex Adhesives  
 Properties of Latex Adhesives Versus Solvent-Based Adhesives  
 Applications for Various Types of Latex Adhesives  
 Characterization of Latex Adhesives  
 A. Physical Properties  
 B. Application Properties  
 C. Performance Properties  
 Adhesive Selection  
 15. THE BONDING PROCESS  
 Storage  
 Preparation of the Adhesive  
 Methods of Adhesive Application  
 Brushing  
 Flowing  
 Spraying  
 Roll Coating  
 Knife Coating  
 Silk Screening  
 Melting  
 Methods of Adhesive Bonding  
 Wet Bonding  
 Reactivation Bonding  
 Pressure-Sensitive Bonding  
 Curing  
 Other Methods of Bonding  
 Inadequate Bonding  
 Methods of Bond Curing  
 Direct Heat Curing  
 Radiation Curing  
 Electric Heaters  
 High Frequency (Radio Frequency) Dielectric Heating  
 Induction Heating  
 Low-Voltage Electric Heating (L.V.H.)  
 Ultrasonic Activation  
 Bonding Pressure  
 Equipment for Processing Adhesives

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.
