

Plant Biotechnology Handbook

Author: NIIR Board

Format: Paperback

ISBN: 8186623833

Code: NI117

Pages: 550

Price: Rs. 1,100.00 US\$ 125.00

Publisher: National Institute of Industrial Research

Usually ships within **5** days

Plant biotechnology is a precise process in which scientific techniques are used to develop molecular and cellular based technologies to improve plant productivity, quality and health; to improve the quality of plant products; or to prevent, reduce or eliminate constraints to plant productivity caused by diseases, pest organisms and environmental stresses. It can be defined as human intervention on plant material by means of technological instruments in order to produce permanent effects, and includes genetic engineering and gene manipulation to obtain transgenic plants. Plant genetic engineering is used to produce new inheritable combinations by introducing external DNA to plant material in an unnatural way. The results are genetically modified plants (GMPs) or transgenic plants. The key instrument used in plant biotechnology is the plant tissue culture (PTC) technique which refers to the in vitro culture of protoplasts, cells, tissues and organs. Plant biotechnology in use today relies on advanced technology, which allows plant breeders to make precise genetic changes to impart beneficial traits to plants. The application of biotechnology in agriculture has resulted in benefits to farmers, producers and consumers. Plant biotechnology has helped make both insect pest control and weed management safer and easier while safeguarding plants against disease. The worldwide demand for food, feed and modern textile fibers can only be met in the future with the help of plant biotechnology. It has the potential to open up whole new business areas that will totally redefine the current market scope and perception.

This book majorly deals with the organisms of biotechnology, herbicide resistant plants, transgenic plants with improved storage proteins, engineering for preservation of fruits, enhancing the photosynthetic efficiency, basic requirements for nitrogen fixation, animal and plant cell cultures, insecticides, cellular characteristics which influence the choice of cell, the growth of animal and plant cells immobilized within a confining matrix, virus free clones through plant tissue culture, microbial metabolism of carbon dioxide, organisms involved in the conversion of hydrogen, hydrogen utilization by aerobic hydrogen oxidizing bacteria, overproduction of microbial metabolites, regulation of metabolite synthesis etc.

The book contains measurement of plant cell growth, plant tissue culture, initiation of embryo genesis in suspension culture, micro propagation in plants, isolation of plant DNA and many more. This is very helpful book for entrepreneurs, consultants, students, institutions, researchers etc.

Contents

1. The organisms of biotechnology

Cells - The Basic Units

Types of Microorganism

Viruses

Prokaryotes

Eukaryotes

Algae
 Protozoa
 Fungi
 Tissue Cultures
 Animal Cells
 Plant Cells
 2. Transgenic plants
 Herbicide Resistant Plants
 1. Glyphosate Tolerant Plants
 2. Sulphonylurea Tolerant Plants
 3. Atrazine Tolerant Plants
 4. Phosphinothricin Tolerant Plants
 5. Bromoxynil Tolerant Plants
 Insect Resistant Plants
 1. Transgenic Plants with Bt Toxin
 2. Transgenic Plants with Bt Toxin and Serine Protease Inhibitor Gene
 3. Transgenic Plants with Cowpea Trypsin Inhibitor
 4. Transgenic Plants with Nicotiana glauca Proteinase Inhibitor
 Virus Resistant Plants
 1. Transgenic Plants with Viral Coat Protein
 2. Transgenic Plants with Viral Nucleoprotein
 3. Transgenic Plants with Viral SAT RNA
 4. Transgenic Plants with Antisense RNA
 Transgenic Plants Resistant to Fungi and Bacteria
 Transgenic Plants with Improved Storage Proteins
 Sweet Proteins
 Enriching the Carbohydrate Contents
 Improving the Quality of Oils and Fats
 Male Sterility and Fertility Restoration
 Changing the Flower Colours
 Stress Tolerant Plants
 Cold Tolerant Plants
 Drought Tolerant Plants
 Plant Tolerant to High Light Intensity
 Engineering for Preservation of Fruits
 Enhancing the Photosynthetic Efficiency
 Transgenic Plants as Bioreactors
 Vaccines
 Interferons
 Pharmaceutical Compounds
 Biodegradable Plastics
 3. Biological Nitrogen fixations
 Non-symbiotic Nitrogen Fixation
 Features Favourable for Non-symbiotic Nitrogen Fixation
 1. Special separation of Nitrogen Fixing Cells
 2. Protein-Nitrogenase Association
 3. High Rate of Respiration
 4. Time specific Nitrogenase Activity
 5. Association with Rapid Oxygen Consumers
 6. Presence of hydrogenase
 7. Colonization
 Nitrogenase

Basic requirements for Nitrogen Fixation
Mechanism of Nitrogen Reduction
Assimilation of Ammonia
Route I

Route II

Symbiotic Nitrogen Fixation

Host Specificity

Root Nodulation

Mechanism of Nitrogen Fixation

(a) Oxygen Transport by Leghaemoglobin

(b) Utilization of Oxygen by Hydrogenase

Nitrogenase

Requirement for Nitrogen reduction

Assimilation of Ammonia

4. Genetics of Nitrogen Fixation

Nif-genes of *Klebsiella Pneumoniae*

Regulation of Nif Genes

Nif-genes of *Azotobacter*

Nif-genes of *Anabaena*

Genetics of Legume-Rhizobium Nitrogen Fixation

1. Rhizobial Genes

a) Nod Genes

b) Nif Genes

c) Hup Genes

2. Legume Nodulin Genes

Leghaemoglobin Gene

Overall Regulation of Genes

Gene Transfer for Nitrogen Fixation

1. Transfer of Nif Genes to Non-Nitrogen Fixing Bacteria

2. Transfer of Nif Genes to yeasts

3. Transfer of Nif-Genes to plants

4. Transfer of Nod Genes

5. Transfer of Hup Genes

5. Mycorrhizae for Agriculture and Forestry

Mycorrhizal types and their structural and nutritional features

Ectomycorrhizae

Mechanism of ECM formation

Morphology and structure

Synthesis of mycorrhiza

Cultural study

Vesicular arbuscular Mycorrhiza

Introduction

Evolution

Taxonomy

Classification

Distribution

Lifecycle

Reproduction

Sexual reproduction

Asexual reproduction

Method of Inoculum production of VAM

Some important steps in production of VAM

Host plant/growth medium
Fertilizations/micronutrients
Chemical application
Control of fungal pathogens
Plant vesicular arbuscular mycorrhizal fungal interactions
VAM and soil biota
Control of root diseases
Endomycorrhiza fungi and tree diseases
Mechanism of disease control
6. Animal and plant cell cultures
Historical perspectives
Products and potentials
Animal cells
Immuno biologicals
1. Virus vaccines
2. Monoclonal antibodies
3. Immunoregulator materials
Insecticides
Enzymes
Hormones
Whole cells
Plant cells
Pharmaceuticals
Food additives
Agrochemicals
Perfumes
Enzymes
Speciality Chemicals
Biomass applications of plant cell cultures
Cell culture and product synthesis
The nature of animal and plant cells in culture
Cell culture initiation
Culture development
Secondary cultures
Culture replication
Industrially useful cell cultures
Substrate independent cultures
Individuality of cell lines in relation to the productivity
Culture media
Growth media
Water
Inorganic salts
Trace elements
Vitamins
Buffers
Sources of energy and carbon
Nitrogen sources
1. Defined nitrogen sources
2. Undefined nitrogen sources
Growth factors
Other ingredients
Maintenance media
Cell culture technologies

Cellular characteristics which influence the choice of cell culture technology

Mixing

Aeration

Doubling times

1. Sterilization of media

2. Sterilization of equipment

Cell stickiness

Immobilized cell systems

The growth and exploitation of cell grown on the surface of a supporting solid substratum

1. Multiple process

2. Unit process

The growth of animal and plant cells immobilized within a confining matrix

1. Gel entrapment systems

2. Applications of entrapped cells

Dynamic cell systems

Air driven systems

Impeller and air driven systems

Impeller mixed systems

7. Somaclonal variation, cell selection and genotype improvement

Somaclonal variation

Historical perspective

The manifold incidence of somaclonal variation

Range of species

Characters displaying variation

Genetic nature of somaclonal variants

Pre-existing or culture induced variation

Genetic and explant sources effects

The origin of somaclonal variation

Chromosomal abnormalities

Molecular possibilities

Gene amplification and diminution

Transposable elements

Cell selection

Disease resistance

Herbicide tolerance

Nutritional quality

Other cell selection systems

8. Virus-free clones through plant tissue culture

Distribution of viruses in plants

Techniques for eradication

Heat treatment

Chemotherapy

Meristem culture

Culture media

Factors affecting developments and rooting

Virus eradication

Major use of virus-free clones

Study effect of virus infection

Source for clonal propagation

Source for in vitro mass propagation

Concluding remarks

9. Microbial metabolism of carbon dioxide

Autotrophic carbon dioxide fixation

The calvin cycle

Molecular structure and properties of RuBP case

Phosphoribulokinase

Carboxysomes

Regulation of ribulose 1,5-biphosphate carboxydase and phosphoribulakinase synthesis

The reductive carboxylic acid cycle

The anaerobic non-phototrophic autotrophs

Heterotrophic carbon dioxide fixation

10. Microbial metabolism of Hydrogen

Introduction

The role of Hydrogen in the biosphere

Enzyme catalysing the evolution and oxidation of Hydrogen

H₂ :+ Ferredoxin Oxidoreductase

H₂ : Ferricytochrome C3 oxidoreductase

H₂ : NAD- Oxidoreductase

H₂ : Coenzyme F420 oxidoreductase

Membrane-bound hydrogenases

Formate hydrogenlyase

Nitrogenase

Organisms involved in the conversion of hydrogen

Hydrogen-producing micro-organisms

Anaerobic conditions

1. Fermentation and fermentative bacteria
2. Anoxygenic photosynthesis and phototrophic bacteria
3. Oxygenic Phototrophic bacteria (Cyanobacteria)
4. Oxygenic green algae

Aerobic conditions : Nitrogen fixing bacteria

Hydrogen consisting organisms

Hydrogen utilization by anaerobes

1. Nitrate-reducing dentifying bacteria
2. Sulfate reducing bacteria
3. Methanogenic bacteria
4. Acetogenic bacteria

5. Furmarate-reducing bacteria

Hydrogen utilization by phototrophs

1. Anoxygenic phototrophs
2. Cyan bacteria
3. Green algae

Hydrogen utilization by aerobic hydrogen-oxidizing bacteria

The potential use of Hydrogenases and hydrogen in biotechnology

11. Microbial grwoth dynamics

Microbial growth in unlimited environments

Basic growth equation from cell number increase

Basic growth equation from increment increase in the population over a small growth time.

Basic growth equations.

Microbial growth in limited environments

Growth limitation by substrate exhaustion

Variation in the observed growth yield

Influence of the growth-limiting substrate on growth rate

Deviation of the Monod equation at High substrate concentrations
 Basic growth limiting substrate equation
 Modelling microbial growth in limited environments
 The logistic equation
 The saturation model
 Microbial growth in open environments
 Chemostat growth kinetics
 The dilution rate
 The dilution rate and biomass concentration
 The dilution rate and growth limiting substrate concentration
 Biomass and growth-limiting substrate concentrations in the steady state
 Determination of $\hat{\mu}_{max}$ from washout kinetics
 Establishing and maintaining the steady state
 Deviations from theoretical chemostat kinetics
 Influence of variation in the observed growth yield
 Microbial competition
 Competition in closed environments
 Competition in open environments
 12. Stoichiometry of microbial growth
 Growth yields and material balances
 Relation between ATP production and growth yields, YATP
 Influence of growth rate and maintenance energy on YATP :
 anaerobic chemostat cultures
 Aerobic yield studies and the influence of the efficiency of
 oxidative phosphorylation on growth yields
 Theoretical calculations on the ATP requirements for the formation
 of microbial biomass
 Influence of Cell Composition
 Influence of the carbon source and complexity of the medium
 Theoretical calculations on the ATP requirement for the
 formation of
 microbial biomass
 Influence of the Nitrogen source
 Influence of the carbon assimilation pathway of the growth substrate
 Energy-dissipating mechanisms during growth with excess
 carbon and source.
 Influence of the degree of reduction of the growth substrate
 Heat production
 The stoichiometry of product formation
 13. Ageing and death in microbes
 Basic principles
 Death of microbes
 Ageing of microbes
 Viability among microbes
 Survival of populations : Cryptic growth
 Injury among microbes
 Stress and survival
 The physiological status of the population
 Overt and actual stress
 Starvation
 Substrate accelerated death (SAD)
 Metabolic and structural injury
 Thymine less death

Survival of slowly growing bacteria
Differentiation and survival
14. Effect of environment on microbial activity
Mechanisms of micro-organisms response to the environment
Primary response due to direct chemical or physicochemical effects
Enzyme inhibition and stimulation
Induction and repression of protein synthesis
Changes in cell morphology
Change in genotype
Dissolved oxygen
Cell Interactions with oxygen
Respiration
Oxygen incorporation
Oxygen as an inhibitor
Oxygen as an enzyme regulator
Measurement of dissolved oxygen
Generalized response to DOT
Diffusion limitation
Response of growing micro-organisms
Respiration rate
Change in cell constituents
Changes in metabolic products
Transient responses to changes in DOT
Control of DOT
Redox potential
Responses to carbon dioxide
Requirement for carbon dioxide
Inhibition by carbon dioxide
Water activity
Introduciton
Halotolerance and halophily
Effects of pH
Introduction
Cellular level responses
Intracellular pH
Effects of pH membrane function
Effects of pH on uptake of substrate
Effects of pH on products of metabolism
Effects of pH on cell morphology an structure
Effects of pH on the chemical environment
Effects of pH on flocculation and adhesion
Optimum pH values for growth
Causes of pH changes in cultures
Product formation
Nutrient uptake
Oxidation/reduction reaction
Chage in buffering capacity
Control of pH
By means of a buffer
By balancing metabolism
By feedback control
Temperature
Cellular-level Responses

Temperature ranges for growth
Response of growth rate to temperature
Effects of temperature on cell death
Effects of temperature on cellular components
1. Membranes
2. DNA
3. RNA
4. Proteins
Cultural effects of temperature
Response to temperature shifts
Effects on substrate utilization
Effects on product formation
Heat generation
Shear
Generation of shear
Effects of shear on filamentous fungi
Effects of shear on protozoa and animal cells in culture
Effects of products on shear rate
General control strategies
15. Biosynthesis of fatty acids and lipids
Nomenclature
Relevance and importance of lipids
Lipid composition of micro-organism
General survey
Bacteria
Yeasts
Fungi
Oleaginous micro-organism
Patterns of lipid accumulation
Factors influencing lipid biosynthesis
Growth rate
Substrate
Temperature
Growth substrate
Oxygen
pH and salinity
Other factors
Lipid biosynthesis
Acetyl- CoA carboxylase
Fatty acid synthetase
Origin of acetyl - CoA
Bacteria
Eukaryotic micro-organism
Biosynthesis of unsaturated fatty acids
Biosynthesis of other fatty acids
Biosynthesis of lipids from fatty acids
Triacylglycerols
Phospholipids
Waxes
Poly β - hydroxybutyrate
Microbial metabolism of alkanes and fatty acids
Alkane-utilizing organisms
Uptake of alkanes

Mechanisms of alkane oxidation
 Oxidation of primary alcohols to fatty acids
 Metabolism of fatty acids derived from alkanes
 α -oxidation
 ω -oxidation
 Microbial products derived from alkanes
 Fatty alcohols and aldehydes
 Fatty acids
 Surfactants
 16. Microbial metabolism of aromatic compounds
 Fission of the Benzene nucleus
 Preparation of nucleus for aerobic fission
 Reactions which follow ring fission
 Pathways of degradation
 Meta fission pathways
 Degradation of 4-hydroxyphenylacetic, homoprotocatechuic
 Homogentisic and gentisic acids
 Proocatechuate 4.5 dioxygenase
 Degradation of 3-O-Methylglucic acid: Biological formation of
 methanol
 Ortho fission pathway
 Separation of pathways used for aromatic catabolism by bacteria
 Catabolism of aromatic compounds in *Trichosporon cutaneum*
 Degradation of aromatic industrial pollutants and pesticides
 Complete mineralization
 Catabolic plasmids
 Release of halogen substrates from benzene nucleus
 Incomplete degradation of aromatics
 17. Bacterial respiration
 The generation of the proton motive force
 Bacterial respiratory chains
 Respiration linked proton translocation
 The proton motive force
 The utilization of the proton motive force
 ATP synthesis
 Active transport of solutes
 Biotechnological aspects of bacterial respiration
 Biomass production
 Waste treatment and metabolite production
 18. Mechanisms of enzyme catalysis
 The events in an enzyme catalysed reaction
 Enzyme mechanisms
 Enzyme kinetics
 Binding of the substrate to the enzyme
 Conformational changes
 Covalent bond making and breaking
 Glucose isomerase
 19. Enzyme evolution
 Regulation of metabolism
 Induction
 Nutritional repression
 Feedback regulation
 Limiting accumulation of end products

Feedback resistance mutations
Additional types of regulations
Permeability consideration
Recent approaches to strain construction
Amino-acid production by genetically engineered strains of
E-Coli and related organisms
Strain construction in other species
20. Microbial photosynthesis
Historical background
General characteristics of microbial photosynthesis
Structure and synthesis of photosynthetic pigments
Chlorophylls and bacteriochlorophylls
Carotenoids
The phycobissins
The initial reactions primary photochemistry and electron transport
Light harvesting
Charge separation and electron transport in an oxygenic
` photosynthesis
ATP synthesis
The eubacterial photosynthetic microbes
Introduction
The anoxygenic phototrophic bacteria
The major groups
Development of the photosynthetic appartus
Carbon metabolism
The Cyano bacteria: oxygenic photosynthesis in a diverse
prokaryotic group
Organization of the photosynthetic appartus
Interrelationship between photosynthetic and
chemosynthetic carbon metabolism in cyanobacteria
21. Extra cellular enzymes
Mechanism of Secretion
Signal hypothesis
Signal hyprosthesis in bacteria
Signal sequence structure
Function of signal peptide and translocation
Processing of the precursor
Gene fusion studies
Membrane associate intermediates
Alternative export mechanisms; post translocational secretion
Aspects of enzyme secretion in fungi
Regulation of Extracellular enzyme synthesis
Regulation of protein synthesis
Induction of exoenzymes
End-product repression
Catabolite repression
Patterns of exoenzyme synthesis
RNA polymerase modification
Catabolite repression
Translocational control of exoenzyme synthesis in bacteria
Control of secretion
22. Overproduction of microbial metabolites
Effects of nutrient limitation

Effects of pH and uncouplers of oxidative phosphorylation
Effects of Temperature
23. Regulation of metabolite synthesis
A phospholactase system in Klebsiella
Catabolism of unnatural sugars
Regulatory mutations
Modular pathways
Evolution of an aliphatic amidase in pseudomonas
Evolution of a new β -Galactosidase in E-Coli
Properties of the wild-type proteins
Evolution of lactose utilization
Evolution of new activities for ebg enzymes
Evolution of the ebg repressor
Decryptifying Existing Genes

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.
