

# Plant Biotechnology Handbook

**Author:** NIIR Board

**Format:** Paperback

**ISBN:** 8186623833

**Code:** NI117

**Pages:** 550

**Price:** Rs. 1,100.00 US\$ 125.00

**Publisher:** National Institute of Industrial Research

Usually ships within **3** days

Plant biotechnology is a precise process in which scientific techniques are used to develop molecular and cellular based technologies to improve plant productivity, quality and health; to improve the quality of plant products; or to prevent, reduce or eliminate constraints to plant productivity caused by diseases, pest organisms and environmental stresses. It can be defined as human intervention on plant material by means of technological instruments in order to produce permanent effects, and includes genetic engineering and gene manipulation to obtain transgenic plants. Plant genetic engineering is used to produce new inheritable combinations by introducing external DNA to plant material in an unnatural way. The results are genetically modified plants (GMPs) or transgenic plants. The key instrument used in plant biotechnology is the plant tissue culture (PTC) technique which refers to the in vitro culture of protoplasts, cells, tissues and organs. Plant biotechnology in use today relies on advanced technology, which allows plant breeders to make precise genetic changes to impart beneficial traits to plants. The application of biotechnology in agriculture has resulted in benefits to farmers, producers and consumers. Plant biotechnology has helped make both insect pest control and weed management safer and easier while safeguarding plants against disease. The worldwide demand for food, feed and modern textile fibers can only be met in the future with the help of plant biotechnology. It has the potential to open up whole new business areas that will totally redefine the current market scope and perception.

This book majorly deals with the organisms of biotechnology, herbicide resistant plants, transgenic plants with improved storage proteins, engineering for preservation of fruits, enhancing the photosynthetic efficiency, basic requirements for nitrogen fixation, animal and plant cell cultures, insecticides, cellular characteristics which influence the choice of cell, the growth of animal and plant cells immobilized within a confining matrix, virus free clones through plant tissue culture, microbial metabolism of carbon dioxide, organisms involved in the conversion of hydrogen, hydrogen utilization by aerobic hydrogen oxidizing bacteria, overproduction of microbial metabolites, regulation of metabolite synthesis etc.

The book contains measurement of plant cell growth, plant tissue culture, initiation of embryo genesis in suspension culture, micro propagation in plants, isolation of plant DNA and many more. This is very helpful book for entrepreneurs, consultants, students, institutions, researchers etc.

## Contents

### 1. The organisms of biotechnology

Cells - The Basic Units

Types of Microorganism

Viruses

Prokaryotes

Eukaryotes

Algae  
 Protozoa  
 Fungi  
 Tissue Cultures  
 Animal Cells  
 Plant Cells  
 2. Transgenic plants  
 Herbicide Resistant Plants  
 1. Glyphosate Tolerant Plants  
 2. Sulphonylurea Tolerant Plants  
 3. Atrazine Tolerant Plants  
 4. Phosphinothricin Tolerant Plants  
 5. Bromoxynil Tolerant Plants  
 Insect Resistant Plants  
 1. Transgenic Plants with Bt Toxin  
     2. Transgenic Plants with Bt Toxin and Serine Protease  
     Inhibitor Gene  
 3. Transgenic Plants with Cowpea Trypsin Inhibitor  
 4. Transgenic Plants with Nicotiana alata Proteinase Inhibitor  
 Virus Resistant Plants  
 1. Transgenic Plants with Viral Coat Protein  
 2. Transgenic Plants with Viral Nucleoprotein  
 3. Transgenic Plants with Viral SAT RNA  
 4. Transgenic Plants with Antisense RNA  
 Transgenic Plants Resistant to Fungi and Bacteria  
 Transgenic Plants with Improved Storage Proteins  
 Sweet Proteins  
 Enriching the Carbohydrate Contents  
 Improving the Quality of Oils and Fats  
 Male Sterility and Fertility Restoration  
 Changing the Flower Colours  
 Stress Tolerant Plants  
 Cold Tolerant Plants  
 Drought Tolerant Plants  
 Plant Tolerant to High Light Intensity  
 Engineering for Preservation of Fruits  
 Enhancing the Photosynthetic Efficiency  
 Transgenic Plants as Bioreactors  
 Vaccines  
 Interferons  
 Pharmaceutical Compounds  
 Biodegradable Plastics  
 3. Biological Nitrogen fixations  
 Non-symbiotic Nitrogen Fixation  
 Features Favourable for Non-symbiotic Nitrogen Fixation  
 1. Special separation of Nitrogen Fixing Cells  
 2. Protein-Nitrogenase Association  
 3. High Rate of Respiration  
 4. Time specific Nitrogenase Activity  
 5. Association with Rapid Oxygen Consumers  
 6. Presence of hydrogenase  
 7. Colonization  
 Nitrogenase

Basic requirements for Nitrogen Fixation  
Mechanism of Nitrogen Reduction  
Assimilation of Ammonia  
Route I

Route II

Symbiotic Nitrogen Fixation

Host Specificity

Root Nodulation

Mechanism of Nitrogen Fixation

(a) Oxygen Transport by Leghaemoglobin

(b) Utilization of Oxygen by Hydrogenase

Nitrogenase

Requirement for Nitrogen reduction

Assimilation of Ammonia

4. Genetics of Nitrogen Fixation

Nif-genes of *Klebsiella Pneumoniae*

Regulation of Nif Genes

Nif-genes of *Azotobacter*

Nif-genes of *Anabaena*

Genetics of Legume-Rhizobium Nitrogen Fixation

1. Rhizobial Genes

a) Nod Genes

b) Nif Genes

c) Hup Genes

2. Legume Nodulin Genes

Leghaemoglobin Gene

Overall Regulation of Genes

Gene Transfer for Nitrogen Fixation

1. Transfer of Nif Genes to Non-Nitrogen Fixing Bacteria

2. Transfer of Nif Genes to yeasts

3. Transfer of Nif-Genes to plants

4. Transfer of Nod Genes

5. Transfer of Hup Genes

5. Mycorrhizae for Agriculture and Forestry

Mycorrhizal types and their structural and nutritional features

Ectomycorrhizae

Mechanism of ECM formation

Morphology and structure

Synthesis of mycorrhiza

Cultural study

Vesicular arbuscular Mycorrhiza

Introduction

Evolution

Taxonomy

Classification

Distribution

Lifecycle

Reproduction

Sexual reproduction

Asexual reproduction

Method of Inoculum production of VAM

Some important steps in production of VAM

Host plant/growth medium  
Fertilizations/micronutrients  
Chemical application  
Control of fungal pathogens  
Plant vesicular arbuscular mycorrhizal fungal interactions  
VAM and soil biota  
Control of root diseases  
Endomycorrhiza fungi and tree diseases  
Mechanism of disease control  
6. Animal and plant cell cultures  
Historical perspectives  
Products and potentials  
Animal cells  
Immuno biologicals  
1. Virus vaccines  
2. Monoclonal antibodies  
3. Immunoregulator materials  
Insecticides  
Enzymes  
Hormones  
Whole cells  
Plant cells  
Pharmaceuticals  
Food additives  
Agrochemicals  
Perfumes  
Enzymes  
Speciality Chemicals  
Biomass applications of plant cell cultures  
Cell culture and product synthesis  
The nature of animal and plant cells in culture  
Cell culture initiation  
Culture development  
Secondary cultures  
Culture replication  
Industrially useful cell cultures  
Substrate independent cultures  
Individuality of cell lines in relation to the productivity  
Culture media  
Growth media  
Water  
Inorganic salts  
Trace elements  
Vitamins  
Buffers  
Sources of energy and carbon  
Nitrogen sources  
1. Defined nitrogen sources  
2. Undefined nitrogen sources  
Growth factors  
Other ingredients  
Maintenance media  
Cell culture technologies

Cellular characteristics which influence the choice of cell culture technology

Mixing

Aeration

Doubling times

1. Sterilization of media

2. Sterilization of equipment

Cell stickiness

Immobilized cell systems

The growth and exploitation of cell grown on the surface of a supporting solid substratum

1. Multiple process

2. Unit process

The growth of animal and plant cells immobilized within a confining matrix

1. Gel entrapment systems

2. Applications of entrapped cells

Dynamic cell systems

Air driven systems

Impeller and air driven systems

Impeller mixed systems

7. Somaclonal variation, cell selection and genotype improvement

Somaclonal variation

Historical perspective

The manifold incidence of somaclonal variation

Range of species

Characters displaying variation

Genetic nature of somaclonal variants

Pre-existing or culture induced variation

Genetic and explant sources effects

The origin of somaclonal variation

Chromosomal abnormalities

Molecular possibilities

Gene amplification and diminution

Transposable elements

Cell selection

Disease resistance

Herbicide tolerance

Nutritional quality

Other cell selection systems

8. Virus-free clones through plant tissue culture

Distribution of viruses in plants

Techniques for eradication

Heat treatment

Chemotherapy

Meristem culture

Culture media

Factors affecting developments and rooting

Virus eradication

Major use of virus-free clones

Study effect of virus infection

Source for clonal propagation

Source for in vitro mass propagation

Concluding remarks

## 9. Microbial metabolism of carbon dioxide

### Autotrophic carbon dioxide fixation

#### The calvin cycle

#### Molecular structure and properties of RuBP case

#### Phosphoribulokinase

#### Carboxysomes

#### Regulation of ribulose 1,5-biphosphate carboxydase and phosphoribulakinase synthesis

#### The reductive carboxylic acid cycle

#### The anaerobic non-phototrophic autotrophs

#### Heterotrophic carbon dioxide fixation

## 10. Microbial metabolism of Hydrogen

### Introduction

#### The role of Hydrogen in the biosphere

#### Enzyme catalysing the evolution and oxidation of Hydrogen

#### H<sub>2</sub> :+ Ferredoxin Oxidoreductase

#### H<sub>2</sub> : Ferricytochrome C<sub>3</sub> oxidoreductase

#### H<sub>2</sub> : NAD- Oxidoreductase

#### H<sub>2</sub> : Coenzyme F<sub>420</sub> oxidoreductase

#### Membrane-bound hydrogenases

#### Formate hydrogenlyase

#### Nitrogenase

#### Organisms involved in the conversion of hydrogen

#### Hydrogen-producing micro-organisms

#### Anaerobic conditions

1. Fermentation and fermentative bacteria
2. Anoxygenic photosynthesis and phototrophic bacteria
3. Oxygenic Phototrophic bacteria (Cyanobacteria)
4. Oxygenic green algae

#### Aerobic conditions : Nitrogen fixing bacteria

#### Hydrogen consisting organisms

#### Hydrogen utilization by anaerobes

1. Nitrate-reducing dentifying bacteria
2. Sulfate reducing bacteria
3. Methanogenic bacteria
4. Acetogenic bacteria

#### 5. Furmarate-reducing bacteria

#### Hydrogen utilization by phototrophs

1. Anoxygenic phototrophs
2. Cyan bacteria
3. Green algae

#### Hydrogen utilization by aerobic hydrogen-oxidizing bacteria

#### The potential use of Hydrogenases and hydrogen in biotechnology

## 11. Microbial growth dynamics

### Microbial growth in unlimited environments

#### Basic growth equation from cell number increase

#### Basic growth equation from increment increase in the population over a small growth time.

#### Basic growth equations.

### Microbial growth in limited environments

#### Growth limitation by substrate exhaustion

#### Variation in the observed growth yield

#### Influence of the growth-limiting substrate on growth rate

Deviation of the Monod equation at High substrate concentrations  
 Basic growth limiting substrate equation  
 Modelling microbial growth in limited environments  
 The logistic equation  
 The saturation model  
 Microbial growth in open environments  
 Chemostat growth kinetics  
 The dilution rate  
 The dilution rate and biomass concentration  
 The dilution rate and growth limiting substrate concentration  
 Biomass and growth-limiting substrate concentrations in the steady state  
 Determination of  $\hat{\mu}_{max}$  from washout kinetics  
 Establishing and maintaining the steady state  
 Deviations from theoretical chemostat kinetics  
 Influence of variation in the observed growth yield  
 Microbial competition  
 Competition in closed environments  
 Competition in open environments  
 12. Stoichiometry of microbial growth  
 Growth yields and material balances  
 Relation between ATP production and growth yields, YATP  
 Influence of growth rate and maintenance energy on YATP :  
 anaerobic chemostat cultures  
 Aerobic yield studies and the influence of the efficiency of  
 oxidative phosphorylation on growth yields  
 Theoretical calculations on the ATP requirements for the formation  
 of microbial biomass  
 Influence of Cell Composition  
 Influence of the carbon source and complexity of the medium  
 Theoretical calculations on the ATP requirement for the  
 formation of  
 microbial biomass  
 Influence of the Nitrogen source  
 Influence of the carbon assimilation pathway of the growth substrate  
 Energy-dissipating mechanisms during growth with excess  
 carbon and source.  
 Influence of the degree of reduction of the growth substrate  
 Heat production  
 The stoichiometry of product formation  
 13. Ageing and death in microbes  
 Basic principles  
 Death of microbes  
 Ageing of microbes  
 Viability among microbes  
 Survival of populations : Cryptic growth  
 Injury among microbes  
 Stress and survival  
 The physiological status of the population  
 Overt and actual stress  
 Starvation  
 Substrate accelerated death (SAD)  
 Metabolic and structural injury  
 Thymine less death

Survival of slowly growing bacteria  
Differentiation and survival  
14. Effect of environment on microbial activity  
Mechanisms of micro-organisms response to the environment  
Primary response due to direct chemical or physicochemical effects  
Enzyme inhibition and stimulation  
Induction and repression of protein synthesis  
Changes in cell morphology  
Change in genotype  
Dissolved oxygen  
Cell Interactions with oxygen  
Respiration  
Oxygen incorporation  
Oxygen as an inhibitor  
Oxygen as an enzyme regulator  
Measurement of dissolved oxygen  
Generalized response to DOT  
Diffusion limitation  
Response of growing micro-organisms  
Respiration rate  
Change in cell constituents  
Changes in metabolic products  
Transient responses to changes in DOT  
Control of DOT  
Redox potential  
Responses to carbon dioxide  
Requirement for carbon dioxide  
Inhibition by carbon dioxide  
Water activity  
Introduciton  
Halotolerance and halophily  
Effects of pH  
Introduction  
Cellular level responses  
Intracellular pH  
Effects of pH membrane function  
Effects of pH on uptake of substrate  
Effects of pH on products of metabolism  
Effects of pH on cell morphology an structure  
Effects of pH on the chemical environment  
Effects of pH on flocculation and adhesion  
Optimum pH values for growth  
Causes of pH changes in cultures  
Product formation  
Nutrient uptake  
Oxidation/reduction reaction  
Chage in buffering capacity  
Control of pH  
By means of a buffer  
By balancing metabolism  
By feedback control  
Temperature  
Cellular-level Responses

Temperature ranges for growth  
Response of growth rate to temperature  
Effects of temperature on cell death  
Effects of temperature on cellular components  
1. Membranes  
2. DNA  
3. RNA  
4. Proteins  
Cultural effects of temperature  
Response to temperature shifts  
Effects on substrate utilization  
Effects on product formation  
Heat generation  
Shear  
Generation of shear  
Effects of shear on filamentous fungi  
Effects of shear on protozoa and animal cells in culture  
Effects of products on shear rate  
General control strategies  
15. Biosynthesis of fatty acids and lipids  
Nomenclature  
Relevance and importance of lipids  
Lipid composition of micro-organism  
General survey  
Bacteria  
Yeasts  
Fungi  
Oleaginous micro-organism  
Patterns of lipid accumulation  
Factors influencing lipid biosynthesis  
Growth rate  
Substrate  
Temperature  
Growth substrate  
Oxygen  
pH and salinity  
Other factors  
Lipid biosynthesis  
Acetyl- CoA carboxylase  
Fatty acid synthetase  
Origin of acetyl - CoA  
Bacteria  
Eukaryotic micro-organism  
Biosynthesis of unsaturated fatty acids  
Biosynthesis of other fatty acids  
Biosynthesis of lipids from fatty acids  
Triacylglycerols  
Phospholipids  
Waxes  
Poly  $\beta$ - hydroxybutyrate  
Microbial metabolism of alkanes and fatty acids  
Alkane-utilizing organisms  
Uptake of alkanes

Mechanisms of alkane oxidation  
 Oxidation of primary alcohols to fatty acids  
 Metabolism of fatty acids derived from alkanes  
 $\alpha$ -oxidation  
 $\omega$ -oxidation  
 Microbial products derived from alkanes  
 Fatty alcohols and aldehydes  
 Fatty acids  
 Surfactants  
 16. Microbial metabolism of aromatic compounds  
 Fission of the Benzene nucleus  
 Preparation of nucleus for aerobic fission  
 Reactions which follow ring fission  
 Pathways of degradation  
 Meta fission pathways  
 Degradation of 4-hydroxyphenylacetic, homoprotocatechuic  
 Homogentisinic and gentisic acids  
 Proocatechuate 4.5 dioxygenase  
 Degradation of 3-O-Methylglucic acid: Biological formation of  
 methanol  
 Ortho fission pathway  
 Separation of pathways used for aromatic catabolism by bacteria  
 Catabolism of aromatic compounds in *Trichosporon cutaneum*  
 Degradation of aromatic industrial pollutants and pesticides  
 Complete mineralization  
 Catabolic plasmids  
 Release of halogen substrates from benzene nucleus  
 Incomplete degradation of aromatics  
 17. Bacterial respiration  
 The generation of the proton motive force  
 Bacterial respiratory chains  
 Respiration linked proton translocation  
 The proton motive force  
 The utilization of the proton motive force  
 ATP synthesis  
 Active transport of solutes  
 Biotechnological aspects of bacterial respiration  
 Biomass production  
 Waste treatment and metabolite production  
 18. Mechanisms of enzyme catalysis  
 The events in an enzyme catalysed reaction  
 Enzyme mechanisms  
 Enzyme kinetics  
 Binding of the substrate to the enzyme  
 Conformational changes  
 Covalent bond making and breaking  
 Glucose isomerase  
 19. Enzyme evolution  
 Regulation of metabolism  
 Induction  
 Nutritional repression  
 Feedback regulation  
 Limiting accumulation of end products

Feedback resistance mutations  
 Additional types of regulations  
 Permeability consideration  
 Recent approaches to strain construction  
 Amino-acid production by genetically engineered strains of  
 E-Coli and related organisms  
 Strain construction in other species  
 20. Microbial photosynthesis  
 Historical background  
 General characteristics of microbial photosynthesis  
 Structure and synthesis of photosynthetic pigments  
 Chlorophylls and bacteriochlorophylls  
 Carotenoids  
 The phycobissins  
 The initial reactions primary photochemistry and electron transport  
 Light harvesting  
 Charge separation and electron transport in an oxygenic  
 ` photosynthesis  
 ATP synthesis  
 The eubacterial photosynthetic microbes  
 Introduction  
 The anoxygenic phototrophic bacteria  
 The major groups  
 Development of the photosynthetic appartus  
 Carbon metabolism  
 The Cyano bacteria: oxygenic photosynthesis in a diverse  
 prokaryotic group  
 Organization of the photosynthetic appartus  
 Interrelationship between photosynthetic and  
 chemosynthetic carbon metabolism in cyanobacteria  
 21. Extra cellular enzymes  
 Mechanism of Secretion  
 Signal hypothesis  
 Signal hyprosthesis in bacteria  
 Signal sequence structure  
 Function of signal peptide and translocation  
 Processing of the precursor  
 Gene fusion studies  
 Membrane associate intermediates  
 Alternative export mechanisms; post translocational secretion  
 Aspects of enzyme secretion in fungi  
 Regulation of Extracellular enzyme synthesis  
 Regulation of protein synthesis  
 Induction of exoenzymes  
 End-product repression  
 Catabolite repression  
 Patterns of exoenzyme synthesis  
 RNA polymerase modification  
 Catabolite repression  
 Translocational control of exoenzyme synthesis in bacteria  
 Control of secretion  
 22. Overproduction of microbial metabolites  
 Effects of nutrient limitation

Effects of pH and uncouplers of oxidative phosphorylation  
Effects of Temperature  
23. Regulation of metabolite synthesis  
A phospholactase system in Klebsiella  
Catabolism of unnatural sugars  
Regulatory mutations  
Modular pathways  
Evolution of an aliphatic amidase in pseudomonas  
Evolution of a new  $\beta$ -Galactosidase in E-Coli  
Properties of the wild-type proteins  
Evolution of lactose utilization  
Evolution of new activities for ebg enzymes  
Evolution of the ebg repressor  
Decryptifying Existing Genes

## About NIIR

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.
