

The Complete Technology Book on Wood and Its Derivatives

Author: NIIR Board of Consultants & Engineers

Format: Paperback

ISBN: 8186623922

Code: NI146

Pages: 502

Price: Rs. 1,100.00 US\$ 29.73

Publisher: National Institute of Industrial Research

Usually ships within **5** days

Wood has been used for hundreds of thousands of years for both fuel and as a construction material. Wood is an organic material, a natural composite of cellulose fibers (which are strong in tension) embedded in a matrix of lignin which resists compression. In the strict sense wood is produced as secondary xylem in the stems of trees (and other woody plants). Wood is used for millennia for many purposes, primarily as a fuel or as a construction material for making houses, tools, weapons, furniture, packaging, artworks, and paper. Wood is composed of cells, and the cell walls are composed of micro fibrils of cellulose and hemicellulose impregnated with lignin. The derivation of chemicals from wood is carried out wherever technical utility and economic conditions have combined to make it feasible. In a living tree it performs a support function, enabling woody plants to grow large or to stand up for themselves. It also mediates the transfer of water and nutrients to the leaves and other growing tissues. Wood may also refer to other plant materials with comparable properties, and to material engineered from wood, or wood chips or fiber. Wood and man have coexisted on this planet from the beginning and wood, as a renewable resource, has provided man with tools, weapons and shelter. Wood, when dry, has unique physical properties in that its tensile strength, bending strength, compression strength, impact resistance and hardness per unit weight are the highest of all construction materials. Wood polymer composites (WPC) are materials in which wood is impregnated with monomers that are then polymerized in the wood to tailor the material for special applications. The resulting properties of these materials, from lightness and enhanced mechanical properties to greater sustainability, has meant a growing number of applications in such areas as building, construction and automotive engineering. Other uses of wood in furniture, buildings, bridges, and as a source of energy are widely known. Wood is perhaps the most used component in our daily life, from home building and furnishings to everything from the tables to the doors are made of wood, and for the people living in colder climates, wood holds even greater importance.

Some of the fundamentals of the book are wood structure and chemical composition, chemical change in wood associated with wood fiberboard manufacture, chemical changes in wood effected by furnish preparation processes, bark extracts as bonding agent for particle board , wood polymer composites and their industrial applications , chemical reactions of preservatives with wood, activation of wood surface and nonconventional bonding , chemistry of weathering and protection , weathering of chemically modified woods, energy and chemicals from wood, charcoal and other chemicals, etc.

The developments in wood industry in the country are mainly attributed to the pioneering work carried in the field of wooden products. There are lots of chemicals and other products extracted from wood. This book contains processes of various wooden products and its derivatives. This is the first book of its kind which is invaluable resource to research scholars, entrepreneurs, technocrats, institutes, libraries and existing one.

Contents

1. Wood: Structure and Chemical Composition
 - Gross Anatomical Features
 - Softwood Anatomy
 - Hardwood Anatomy
 - Cell Wall Structure
 - Chemical Composition of Cell Wall
2. Chemical Change in Wood Associated with Wood Fiberboard Manufacture
 - Furnish Preparation Processes
 - Wet Form Process Using Pressurized Refining.
 - Chemical Changes in Wood Effected by Furnish Preparation Processes
 - Board Conversion Processes
 - Wet Strength Properties of Hot Pressed Boards
 - Mechanism of Wet Strength Properties
 - Chemical Changes in Wood Effected by Board Conversion
3. Review of Particleboard Manufacture and Processing
 - Definition
 - Materials
 - Manufacturing
 - Particle Drying
 - Blending
 - Mat Formation
 - Finishing
 - Conclusion
4. Bark Extracts as Bonding Agent for Particle board
 - Material and Preparation
 - Bark Extracts
 - Three Layer Particleboard
 - Testing
5. Composition Boards Containing Bark
 - Amounts of Bark Available
 - Review of Efforts to Use Bark in Composition Boards
6. Polyurethane Foams from the Reaction of Bark and Diisocyanate
7. Wood Polymer Composites and their Industrial Applications
 - Chemistry of the Process
 - Impregnation Process
 - Monomers For Wood Polymer Composites
 - Physical Properties
 - Commercial Applications
 - Radiation Process.
 - World Wide Production
8. Interaction of Preservatives with Wood
 - Major Use Wood Preservatives
 - Minor Use Wood Preservatives
 - Copper Naphthenate.
 - Copper 8 Quinolinolate (Copper 8)
 - Tributyltin Oxide.
 - New Wood Preservatives
 - Preservative Distribution in Wood
 - Macrodistribution
 - Chemical Reactions of Preservatives with Wood

Inorganic Salt Preservatives.
 Organic Preservatives
 9. Chemistry of Adhesion
 Thermoplastic and Thermosetting Polymers
 Molecular Forces Between Adherend and Adhesive
 Adhesives for Wood
 Phenolic Resin Adhesives
 Resoles
 Novolak
 Resorcinol Resins
 Durability and Fracture Toughness
 Urea Formaldehyde and Melamine Formaldehyde Resins
 Isocyanate Based Adhesives
 Thermoplastic Adhesives
 Hot Melt Adhesives
 Acidity of Wood
 10. Activation of Wood Surface and Nonconventional Bonding
 Conditions and Methods of Wood Surface Formation.
 Direct Covalent Wood to Wood Bonding
 Bonding Through Intermediacy of Bifunctional Molecules
 Bonding by Intermediacy of a Covalently Attached Polymer
 Use of Oxidants
 Fundamental Studies
 Surface Activation.
 Hydrogen Peroxide Activation
 Plasma Activation
 Other Oxidizing Activators
 Nonconventional Bonding
 Direct Bonding
 Bifunctional Amines
 Bifunctional Acids
 Bifunctional Isocyanates
 Polymers
 Conclusions
 Addenda
 Wood Surface Studies
 Nonconventional Bonding with Acid Activation

 Nonconventional Bonding with Oxidant Activation
 Isocyanates
 Nonpolar Nonconventional Binders
 Other Methods
 Patents
 11. Chemistry of Weathering and Protection
 Backgrounds
 General Aspects of Wood Weathering
 Anatomic Structure of Wood and Its Weatherability
 Weathering Factors
 Other Factors
 Penetration of Light and Wood Surface Deterioration
 Property Changes During Weathering
 Chemical Changes
 Colour Changes

- Physical Changes
- Microscopic Changes
- Transverse Section
- Radial Section
- Tangential Section
- Weathering of Wood Based Materials
- Plywood
- Reconstituted Panel Products
- Weathering of Chemically Modified Woods
- Free Radical Reactions in Lignin
- Free Radical Characteristics and Reactions in Weathered
- Participation of Singlet Oxygen in the Weathering Process
- Protection Against Weathering
- Film Forming Finishes
- Varnishes
- Natural Wood Finishes
- Film Forming
- Penetrating
- Transparent
- Semitransparent
- Protection of Wood Based Materials
- Wood Coating Interactions
- Summary and Future Considerations
- 12. Biological Decomposition of Solid Wood
- Susceptibility and Resistance
- Types of Wood Deterioration
- Deterioration without Decomposition.
- Deterioration with Decomposition
- Mechanobiochemical Decomposition
- Biochemical Decomposition: The Wood Decays
- Types of Decay
- Progressive Changes in Chemical Composition
- Progressive Changes in Strength Properties
- Cellulose Decomposition
- Hemicellulose Decomposition
- Lignin Decomposition
- Control and Uses of Wood Decomposing Organisms
- Uses and Potential Uses
- 13. The Chemistry of Pyrolysis and Combustion
- Formation of Volatile Products from Cellulose
- First Pathway
- Second Pathway
- Dehydration Reactions
- Formation and Properties of Char
- Char Formation
- Char Reactivity
- Combustion
- Combustibility
- 14. Chemistry of Fire Retardancy
- Early Studies
- Protection of Wood with Fire Retardants
- Thermogravimetric Analysis (TG).

Differential Thermal Analysis and Differential Scanning Calorimetry

Tunnel Flame Spread Tests

Critical Oxygen Index Test

Test Methods for Related Properties

Smoke Production.

Heat Release Rate

Toxicity

Mechanisms of Fire Retardancy

Chemistry of Burning

Vapor phase Combustion

Smoldering And Glowing

Theories of Fire Retardancy

Barrier Theories

Thermal Theories

Dilution or Noncombustible Gases Theories

Free Radical Trap Theories

Increased Char/Reduced Volatiles Theories

Reduced Heat Content of Volatiles Theories

Phosphorus Nitrogen Synergism Theories

Smoldering Inhibition Theories

Fire Retardant Formulations

Major Chemicals

Aluminum Trihydrate

Miscellaneous Chemicals

Leach resistant Chemicals

Amino resins

Future Research

Leach Resistant Compounds

Improved Fire Retardant Treatments for Panel Products

Effective Coating Systems

Reduced Smoke and Toxicity

Basic Mechanisms. Finally, further work

Summary

Mechanism.

Formulations

Future Research

15. ENERGY AND CHEMICALS FROM WOOD

Alternate Energy Sources

Available Forest Residues

Energy and Fuels from Wood

Direct Combustion

Saccharification Fermentation

Ethanol from wood

Thermal Decomposition

Charcoal and other Chemicals

Thermochemical Liquefaction

Furfural from Wood

Fiberboard, particleboard, and flakeboard

Plywood

Laminated Lumber

Industrial Use of Energy

Energy Plantations

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.
