

# The Complete Book on Glass Technology

**Author:** NPCS Board of Consultants & Engineers

**Format:** Paperback

**ISBN:** 8178330172

**Code:** NI205

**Pages:** 584

**Price:** Rs. 1,625.00    **US\$** 150.00

**Publisher:** Asia Pacific Business Press Inc.

Usually ships within **5** days

Glass is an amorphous solid usually formed by the solidification of a melt without crystallisation. It is an inorganic product of melting, which has been cooled to rigid state without crystallization. Melting is in fact the sole large scale industrial method of glass making. Glass is being used worldwide and has various applications. They are typically brittle and optically transparent. It is widely used in buildings and having industrial applications. The presence of glasses in our everyday environment is so common that we rarely notice their existence. Glass, as a substance, plays an essential role in science and industry. There are various methods of glass making other than melting for example condensation of vapours, conversion of crystals to an amorphous form using mechanical means or irradiation with fast neutrons, dehydration and sintering of gels, etc. Silica (the chemical compound  $\text{SiO}_2$ ) is a common fundamental constituent of glass. The properties of glass can be varied and regulated over an extensive range by modifying the composition, production techniques, or both. In any glass, the mechanical, chemical, optical, and thermal properties cannot occur separately. Instead, any glass represents a combination of properties, and in selecting an individual glass for a product, it is this combination that is important. As an architectural element, glass has become the quite essential product for your home or building. The applications of glass are limited only by your imagination; glass has many applications both internal and external that play a vital role in the function and design of your project. Industrially produced glasses can be divided into groups according to various criteria: composition, appearance, properties, application, method of forming etc. According to their chemical composition glasses are classified as silica glass (quartz glass), water (soluble) glass or sodium silicate glass, crystal glass, heat resistant glass, low alkali glass etc. Glass is finding ever wider applications in modern technology; sealing glasses which have been in use for many years, serve in vacuum tight joining of glass to metal, especially in vacuum electronics, in nuclear technology (protection from radiation, immobilization of radioactive waste by fusion into a chemically, resistant glass, etc.), in agriculture (as carrier of fertilizers with long term effects) and a number of possible application in electronics and many more. Some of the fundamentals of the book are structure of glass, structure of special melts and glasses, composition of glass, glass formation, crystallization and liquid, optical properties, theoretical strength of glasses, practical strengths of glasses, flaw sources and removal, viscosity of glass forming melts, theoretical principles of glass melting, chemical reactions occurring in glass melting, dissolution of solids in the melt, flow of glass in melting furnaces, physical chemical factors in sol gel processing, deposition of transparent non crystalline, metal oxide coatings by the sol gel process etc. The present book covers different important parameters of glass technology. The book is comprehensive guide for researchers, technologists, new entrepreneurs and professionals.

## Contents

### 1. GLASS

Definition and Historical Summary  
Structure of Glass  
Structure of Special Melts and Glasses  
Composition of Glass  
Glass Formation, Crystallization and Liquid  
Immiscibility  
Chemical, Mechanical and Physical Properties of  
Industrially Important Melts and Glasses  
Rheological Properties of Glass Melts  
Surface Tension  
Density  
Thermal Expansion  
Elastic Properties  
Mechanical Strength  
Hardness  
Thermal Properties  
Electrical Properties  
Gas Permeability  
Chemical Stability and Surface Properties  
Optical Properties  
Color of Glasses  
Production of Glass  
Raw Materials  
Melting Units  
Melting, Fining and Homogenization  
Glass Cooling  
Heating and Regulating Glass Melts  
Refractory Lining of Melting Units  
Vapor-Deposited Glasses  
Occupational Health  
Forming  
Hand Forming  
Annealing  
Secondary of Finishing Operations  
Uses  
Silica and Silica-like Glass  
Flat Glass  
Laboratory Glassware  
Light-Sensitive Glass  
Display Devices  
Glass Fibers  
Molded Optics  
Glasses for Nonlinear Optical Devices  
Economic Aspects  
**2. OPTICAL PROPERTIES**  
Introduction  
Bulk Optical Properties  
Refractive Index  
Molar and Ionic Refractivities  
Dispersion  
Ultraviolet Absorption  
Visible Absorption  
Ligand Field Coloration of Glasses

Amber Glass  
Colloidal Metal Colors  
Colloidal Semiconductor Colors  
Radiation-induced Colors  
Solarization  
Infrared Absorption  
Infrared Absorption by Bound Hydrogen Species  
Infrared Absorption by Dissolved Gases  
Infrared Cutoffs or the Multiphonon Edge  
Other Optical Properties of Glasses  
Photosensitive and Photochromic Glasses  
Opal Glasses  
Faraday Rotation

### 3. MECHANICAL PROPERTIES

Introduction  
Elastic Modulus  
Hardness  
Fracture Strength  
Theoretical Strength of Glasses  
Practical Strengths of Glasses  
Flaw Sources and Removal  
Strengthening of Glass  
Statistical Nature of Fracture of Glass  
Fatigue of Glasses  
Thermal Shock  
Annealing of Thermal Stresses

### 4. VISCOSITY OF GLASSFORMING MELTS

Introduction  
Viscosity Definitions and Terminology  
Viscoelasticity  
Viscosity Measurement Techniques  
Rotation Viscometers  
Falling Sphere Viscometers  
Fiber Elongation Viscometers  
Beam-bending Viscometers  
Other Viscometers  
Temperature Dependence of Viscosity  
Fragility of Melts  
Free Volume Model for Viscous Flow  
Entropy Model for Viscous Flow  
Compositional Dependence of Viscosity  
Silicate Melts  
Borate Melts  
Germanate Melts  
Halide Melts  
Chalcogenide Melts  
Effect of Hydroxyl on Melt Viscosities  
Effect of Thermal History on Viscosity  
Effect of Phase Separation on Viscosity  
Effect of Crystallization on Viscosity

### 5. STRUCTURE OF GLASSES

Glass Formation  
Models of Glass Structure

The Structure of Oxide Glasses  
 Submicrostructural Features of Glasses  
 Miscibility Gaps in Oxide Systems  
 General Discussion  
 6. GLASS TECHNOLOGY  
 The Characteristics of Glass  
 Properties of Molten Glasses  
 Viscosity  
 Crystallization  
 Surface Tension  
 Density  
 Specific Heat  
 Thermal Conductivity  
 Electrical Conductivity  
 Theoretical Principles of Glass Melting  
 Chemical Reactions Occurring in Glass Melting  
 Dissolution of Solids in the Melt  
 Flow of Glass in Melting Furnaces  
 Homogenization  
 Volatilization  
 Refining and Solubility of Gases  
 Flat Glass and Tube-forming Processes  
 The Forming of Glass Fibres  
 Properties of Glass  
 Mechanical Properties  
 Thermal Properties  
 Optical Properties  
 Electrical Properties  
 Chemical Durability  
 Principle Types of Industrial Glasses  
 Silica Glass (quartz glass)  
 Sodium-Silicate Glass (water glass)  
 Sheet and Container Glass; the System  $\text{Na}_2\text{O}-\text{CaO}-\text{SiO}_2$   
 Crystal Glass; the System  $\text{K}_2\text{O}-\text{CaO}-\text{SiO}_2$  and  $\text{K}_2\text{O}-\text{PbO}-\text{SiO}_2$   
 Heat-Resistant Glasses of the System  $\text{Na}_2\text{O}-\text{B}_2\text{O}_3-\text{SiO}_2$   
 Coloured Glasses  
 Opal Glasses  
 Optical Glasses  
 Glass Fibres  
 Other Types of Oxide Glasses and Products  
 Chalcogenide Glasses  
 7. NITRIDATION OF SILICA SOL-GEL THIN FILMS  
 Introduction  
 Experimental Methods  
 Results and Discussion  
 Film Shrinkage  
 Refractive Index  
 SIMS Depth Profiles  
 Auger Analyses  
 Enhancing the Nitridation Reaction with a Chlorine  
 Pretreatment  
 8. MODIFICATION OF OXIDES BY POLYMERIZATION  
 PROCESS

Introduction  
 Introduction of Chemical-Structural Variations in  
 Inorganic Polymers  
 Theoretical Bases  
 Experimental  
 Effect on Properties  
 Effect on Densification and Viscosity  
 Effect on Crystallization and Crystalline Transformations  
 9. DRYING AND FIRING MONOLITHIC SILICA  
 SHAPES FROM SOL-GELS  
 Introduction  
 Experimental Technique  
 Results and Discussion  
 10. SOL-GEL-DERIVED INDIUM-TIN-OXIDE COATINGS  
 Introduction  
 Properties of Sol-Gel Derived ITO Coatings  
 Characteristic Properties of ITO-Coatings for Window-  
 Systems Derived from Dip Coating  
 Optical Properties  
 Architectural Properties  
 Mechanical Properties  
 Chemical Properties  
 Long-Term Stability, Weatherability, Outdoor Tests  
 Properties of an Insulating Glass Unit (One Pane ITO-  
 Coated)  
 11. RELATIONSHIPS BETWEEN THE SOL-TO-GEL AND  
 GEL-TO-GLASS CONVERSIONS  
 Introduction  
 Gelation  
 Gel-to-Glass Conversion  
 Experimental  
 Results & Discussion  
 Physical Properties  
 Shrinkage and Densification  
 Isothermal Shrinkage Experiments  
 12. MONOLITHIC XERO-AND AEROGELS FOR  
 GEL-GLASS PROCESSES  
 Introduction  
 Main Steps in Gel Processing  
 Cracking During the Drying Process  
 Analysis of Causes of Cracking  
 Effect of Capillary Forces  
 Concept of Moisture Stress  
 Mechanical Resistance of the Gel  
 Ways of Avoiding Cracking During Drying  
 Monolithic Aerogels  
 Conclusion  
 13. BEHAVIOR OF MONOLITHIC SILICA AEROGELS  
 AT TEMPERATURES ABOVE 1000°C  
 Introduction  
 Densification of the Gel  
 Experimental Procedure  
 Results and Discussion

Conclusion

#### 14. TiO<sub>2</sub> COATED GLASS BEADS

Introduction

Experimental

Materials

Instrumentation

Preparation of Catalysts

Hydrogenation Experiments

Results and Discussion

Features of Glass Beads Coated with TiO<sub>2</sub>

Catalytic Activity of Pd Dispersions on TiO<sub>2</sub> Coated

Glass Supports

#### 15. DEPOSITION OF TRANSPARENT NON-CRYSTALLINE METAL OXIDE COATINGS BY THE SOL-GEL PROCESS

Introduction

Dip-Coating Technique

Single-Layer Coatings with Refractive Index Gradient

Experimental Work

Results and Discussion

SiO<sub>2</sub>-B<sub>2</sub>O<sub>3</sub>-Na<sub>2</sub>O System

SiO<sub>2</sub>-BaO System

#### 16. PHYSICAL CHEMICAL FACTORS IN SOL-GEL PROCESSING

Introduction

Gel Synthesis

Principles of Gelation

Silica Gel

TiO<sub>2</sub> Gels

SiO<sub>2</sub>-B<sub>2</sub>O<sub>3</sub> Gels

SiO<sub>2</sub>-TiO<sub>2</sub> Gels

Na<sub>2</sub>O-SiO<sub>2</sub> Gels

Drying

The Gel-Glass Conversion

Conclusions

## About NIIR

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.
