

# Handbook on Fermented Foods and Chemicals

**Author:** NPCS Board of Consultants & Engineers

**Format:** Paperback

**ISBN:** 9788178331379

**Code:** NI233

**Pages:** 672

**Price:** Rs. 1,875.00 US\$ 150.00

**Publisher:** Asia Pacific Business Press Inc.

Usually ships within **5** days

Numerous foods are prepared by fermentation processes in which one or more kinds of microorganisms are responsible for the characteristic flavour or texture, and sometimes for the keeping quality of the product. The manufacture of fermented food products is carried out on a small scale in homes in every country. Fermented products are more palatable and are not as easily spoiled as the natural products. The microorganisms that produce the desirable changes may be the natural flora on the material to be fermented, or may be added as starter cultures.

The yield of organic acids principally lactic, serve as a preserving agents. Lactic acid fermentation is an anaerobic intramolecular oxidation reduction process. Both homofermentative and heterofermentative lactic acid bacteria participate in food fermentations. In some fermented food products, yeasts and moulds also participate along with lactic acid bacteria.

Most of the reactions in living organisms are catalyzed by protein molecules called enzymes. Enzymes can rightly be called the catalytic machinery of living systems. The real break through of enzymes occurred with the introduction of microbial proteases into detergents.

Most of the enzymes are produced by microorganisms in submerged cultures in large reactors called fermentors. In choosing the production strain several aspects have to be considered. Industrial enzyme market is growing steadily. The reason for this lies in improved production efficiency resulting in cheaper enzymes, in new application fields. Tailoring enzymes for specific applications will be a future trend with continuously improving tools and understanding of structure-function relationships and increased search for enzymes from exotic environments. This field deals with how are the enzymes used and applied in practical processes. A lot of fungal, bacterial and actinomycete strains with potential for producing novel industrial enzymes have been identified.

This book contains sterilization, fermentation processes, aeration and agitation, use of yeast, yeast production, fermentation raw materials, production of bacterial enzymes, bread making methods, effluent treatment, production of actinomycete protease, lactic acid, citric acid. This handbook will be very helpful to its readers who are just beginners in this field and will also find useful for upcoming entrepreneurs, existing industries, food technologist, technical institution etc.

## Contents

### 1. The Development of Inocula for Industrial Fermentations

Introduction

The development of inocula for yeast processes

Brewing

Baker's™ Yeast

The development of inocula for bacterial processes

The development of inoculum for fungal processes  
Sporulation on Solidified Media  
Sporulation on Solid Media  
Sporulation in Submerged Culture  
The Use of the Spore Inoculum  
Inoculum Development for Vegetative Fungi  
The Effect of the Inoculum on the Morphology of Fungi in Submerged Culture  
The development of inoculum for streptomycete processes  
The aseptic inoculation of plant fermenters  
Inoculation from a Laboratory Fermenter or a Spore Suspension Vessel  
Inoculation from a Plant Fermenter

## 2 An Introduction to Fermentation Processes

Lactate  
Acetaldehyde  
Acetolactate  
Butanediol  
Ethanol  
The range of fermentation processes  
Microbial Biomass  
Microbial Enzymes  
Microbial Metabolites  
Transformation Processes  
The chronological development of the fermentation industry  
The component parts of a fermentation process

## 3. Sterilization

Introduction  
Medium sterilization  
Advantages of Continuous Sterilization over Batch Sterilization  
Advantages of Bath Sterilization over Continuous Sterilization  
The design of batch sterilization processes  
Calculation of the Del Factor during Heating and Cooling  
Calculation of the Holding Time at Constant Temperature (121°C)  
Richards's™ Rapid Method for the Design of Sterilization Cycles  
The Scale Up of Batch Sterilization Processes  
Method of Batch Sterilization  
The design of continuous sterilization processes  
Sterilization of the fermenter  
Sterilization of the feeds  
Sterilization of Air  
The Theory of Fibrous Filters  
Filter design

## 4. Media for Industrial Fermentations

Introduction  
Typical media  
Medium formulation  
Water  
Energy sources  
Carbon sources  
Examples of Commonly Used Carbon Sources  
Factors Influencing the Choice of Carbon Source

## The Influence of the Carbon Source on Product Formation

Nitrogen sources

Examples of Commonly Used Nitrogen Sources

Factors Influencing the Choice of Nitrogen Source

Vitamin sources

Nutrient recycle

Buffers

The addition of precursors and metabolic regulators to media

Precursors

Inhibitors

Inducers

Oxygen requirements

Fast Metabolism

Rheology

Restricted nutrient levels

Antifoams

## 5. Aeration and Agitation

Introduction

The oxygen requirements of industrial fermentations

Glucose

Oxygen supply

Determination of  $K_{La}$  values

Gassing-out techniques

The static method of gassing out

The dynamic method of gassing out

Fluid rheology

Bingham Plastic Rheology

Pseudoplastic Rheology

Dilatant Rheology

Casson Body Rheology

Factors affecting  $K_{La}$  values in fermentation vessels

The Effect of Air-Flow Rate on  $K_{La}$

The Effect of the Degree of Agitation on  $K_{La}$

The relationship between  $K_{La}$  and power consumption

The relationship between power consumption and operating variables

The Effect of Medium and Culture Rheology on  $K_{La}$

Medium rheology

The effect of microbial biomass on  $K_{La}$

The effect of microbial products on aeration efficiency

The Effect of Foam and Antifoams on Oxygen Transfer

## 6. Mushrooms

Mushrooms and single-cell (microbial) protein

Production of the oyster mushroom, *Pleurotus* Species

Methods of Cultivation

Economics of Industrial Production

Growth of *Pleurotus Ostreatus* on Waste Paper

Growth of *Pleurotus ostreatus* on waste paper

Production of *volvariella volvacea*: straw mushrooms

Description

Patterns of Production and Consumption

Steps in Production

Factors Controlling Mushroom Production  
Harvesting and Preservation  
Discussion of Processing Steps  
Preservation of Straw Mushrooms  
Nutritional Content  
New Microbial Strains  
Expansion of Straw Mushroom Production  
Edible termitomyces and their culture in the laboratory  
Collection and Identification of Termitomyces Species  
Culture of the Edible Species  
Effect of Culture Media on Mycelia Growth  
Effect of Light, Temperature, and pH on Mycelial Growth  
Spawn Formation  
Fruiting Body Formation  
Results and Discussion  
Isolation in Pure Culture  
Effect of Culture Media  
Effect of Temperature  
Effect of Light  
Effect of pH  
Spawn and Fruiting Body Formation

## 7. Use of Yeast in Baking

Historical Introduction  
Function of yeast in baking  
Leavening  
Effect of Yeast on Dough Development  
Flavour Development  
Forms of yeast used in baking  
Compressed Yeast  
Active Dry Yeast  
Yeast for Home Baking  
Yeast of Enrichment  
Behaviour of yeast in dough systems  
Use of Yeast in Various Dough Systems  
Growth of Yeast in Doughs  
Accelerated Processing of Yeast-raised Products  
Yeast-leavened, Unbaked, Frozen Doughs  
Sour Doughs

## 8. Distillers'™ Yeast

Introduction  
Raw materials  
Yeast preparation  
Distillers'™ Yeast  
Inoculation of Yeast Mash from Preceding Mash  
Inoculation of Yeast Mash with Laboratory Pure Cultures  
Use of Compressed or Active Dry Bakers'™ Yeast  
Distillers'™ fermentations  
Contaminants  
Distillation  
Composition of distilled spirits

## 9. Brewers'™ Yeast

### Introduction

General characteristics of brewers'™ yeasts

Specific characteristics of brewers'™ yeasts

Flocculation

Wild Yeasts

Yeasts Cultivation and Pitching

Nitrogen Metabolism of Brewers; Yeast

Vitamin Requirements

Mineral Requirements

Fermentation of Wort Sugars

Effect of Temperature and Other Variables on Rate and Time of Fermentation

Growth of Yeast

By-products of alcoholic fermentation

Higher Alcohols (Fusel Oils)

Esters

Diacetyl, Acetoin, 2, 3-Butanediol, and 2, 3-Pentanedione

Aldehydes

Glycerol

Acids

Sulfur Compounds

Processing

Generation of Heat

Batch Fermentations and Modified Batch Fermentations

Continuous Fermentation

Microbial Stability of Beer

Adsorption of Isohumulone and Anthocyanins by Yeast

## 10. Wine Yeasts

### History

Wine yeast terminology

Description of species

Natural yeasts and their occurrence in grapes and musts

Fermentation by natural yeasts and by wine yeasts

Production of wine yeast starters

Compressed wine yeast and active dry wine yeast

Biochemistry of wine yeast fermentations

Rate of Fermentation

Effect of Temperature

Fermentable Sugars in Musts and Yield of Ethanol

Effect of Carbon Dioxide Pressure on Fermentation

Effect of Ethanol on Fermentation Rate

Effect of pH on Rate of Fermentation

Sulfur Dioxide

Diethyl Pyrocarbonate (DEPC)

Sorbic Acid and p-hydroxybenzoic Acid Esters

Tannins

Ion-exchange Resins, Antibiotics and Fungicides

By-products of the alcoholic fermentation, flavor compounds, acids and yeast nutrients

### Introduction

Alcohols

Aldehydes

Glycerol, 2,3-Butylene Glycol, Acetoin and Diacetyl

Esters  
Malic Acid and the Malo-lactic Fermentations  
Acids  
Nitrogenous Compounds  
Sulfur Compounds  
Vitamin Requirements of Wine Yeasts  
Production of wines  
Introduction  
Red and White Table Wines  
Sherry  
Sparkling Wines  
Fermentation of Uncrushed Grapes (Maceration Carbonique)  
Continuous Fermentation  
Cider and Other Fruit Wines

## 11. Bakers'™ Yeast Production

History  
Outline of the manufacturing process  
Raw materials  
Molasses  
Minerals  
Vitamins  
Nitrogen  
Fermentation Activators  
Fermentation Inhibitors  
Principles of aerobic growth of bakers'™ yeast  
Introduction  
Concentration of Fermentable Sugars  
Limitation of Yeast Growth Rate  
Oxygen Requirements and Aeration  
Effect of pH  
Temperature  
Yield Energy, and the Development of Heat  
Osmotic Pressure  
Yeast Concentration in the Fermenter  
Periodicity and Budding  
Practice of the aerobic growth of bakers'™ yeast  
Fermentation Tanks  
Cooling  
Aeration Systems  
Feed Rates  
Sequence of Fermentations  
Defoaming  
Utilization of Ethanol  
Automatic Process Control  
Continuous Aerobic Propagation of Bakers'™ Yeast  
Harvesting of Yeast Cells  
Mixing, Extruding and Packaging Compressed Yeast  
Contamination  
Stability of Compressed Yeast  
Active Dry Yeast

## 12. Lactic Acid $\text{CH}_3\text{CHOHCOOH}$

From whey by Fermentation  
Reaction  
Material Requirements  
Process  
From Lactonitrile  
Use Pattern  
Miscellaneous  
Economic Aspects

13 Citric Acid  
From Molasses by Fermentation  
Reaction  
Material Requirements  
Process  
By Submerged Fermentation  
Use Pattern  
Miscellaneous  
Economic Aspects

14. A Milk-Bottle Fermentation

15. The Fermentor: An Elaborate Milk Bottle

16. Fermentation Raw Materials

17. A Typical Industrial Fermentation

18. Production of Actinomycete Protease by Solid-State Fermentation and its Application in Dehairing of Goatskin  
Introduction  
Materials and methods  
Isolation of Proteolytic Soil Actinomycetes  
Dehairing of Goatskins  
Analyses  
Determination of Protein  
Protease Assay  
Results  
Isolation of Proteolytic Soil Actinomycetes  
Discussion

19. Fermented Vegetables  
Introduction  
Theory behind fermented vegetables  
Indian or oriental fermented vegetables  
Fermented vegetables of the west  
Advantages of Fermented Vegetables: Disadvantages of Fermented Vegetables

20 Production of Bacterial Extracellular Enzymes by Solid State Fermentation  
Introduction  
Materials and methods  
Bacterial Strains  
Enzyme Production in SSF  
Amylase Production vs. Incubation Period

Effect of Moisture Level  
Effect of Various Additives  
Solid State Cultivation in Trays  
Enzyme Assays  
Results and discussion

## 21. Fermented Products

## 22. Bread Characteristics

Introduction  
External characteristic  
Volume  
Bloom  
Crust Colour  
Factors Affecting the Crust Colour  
Evenness of Bake  
Factors Affecting Evenness of Bake  
Oven Break  
Factors Affecting Oven Break  
Internal characteristics  
Crumb Colour  
Factors Affecting Crumb Colour  
Crumb Structure  
Factors Affecting Crumb Structure  
Crumb Clarity and Elasticity  
Crumb Clarity  
Crumb Elasticity  
Sheen and Texture  
Sheen  
Texture  
Taste and Aroma  
Factors Affecting Taste and Aroma  
Moistness  
Factors Affecting Moistness  
Cleanliness  
Bread faults  
Introduction  
External faults  
Faults in Volume  
Lack of Volume  
Excessive Volume  
Faults in Crust  
Lack of Crust Colour  
Dark Crust Colour  
Cracking of Crust

Leathery Crust  
Hard Crust  
Thick Crust  
Blisters  
Lack of Bloom  
Shell Top  
Irregularity of Shape  
Lack of Cleanliness  
Internal faults  
Holes and Tunnels  
Core, Seams, Streaks & Condensation Mark  
Damp, Clamy & Closed Crumb  
Dryness and Rapid Staling  
Crumbliness of the Crumb  
Defects in Taste and Aroma  
Summary of bread faults and their causes  
Bread diseases  
Introduction  
Rope  
Bacteria Responsible  
Symptoms  
Sources of Contamination  
Moulds  
Types  
Causes  
Preventive Measures  
Chemical Inhibitors  
Germicidal Ultraviolet Rays  
Recommended Bread Making Practices  
Cleaning

Use of Additives  
Bake shop emergencies  
Introduction  
Yeast problem  
Shortage of Yeast  
No Yeast in the Dough  
Too Much Yeast  
Salt problem  
Dough without Salt  
Too Much Salt  
Too Much Sugar, Shortening or Milk  
Overweight of Flour or Water  
Late Mixing

### 23. Other Fermented Products

Introduction  
Bun goods  
Raw Material  
Processing  
Prepared Mixtures  
Pitza base/crust  
Raw Material  
Processing  
Doughnut  
Raw Material  
Procesing

### 24. Bread Ingredient

Introduction

Raw material  
Flour  
Colour  
Strength  
Tolerance  
Water Absorption Power  
Uniformity  
Diastetic Activity  
Effect of Low and High Diastetic Activity on Bread  
Preventive Measures

## 25. Bread Making Methods

Introduction  
Conventional methods  
Straight Dough Method  
Advantages and Disadvantages  
Sponge and Dough Method  
Advantages and Disadvantages  
Salt Delayed Method  
Advantages and Disadvantages  
No Dough Time Method  
Advantages and Disadvantages  
Ferment and Dough Process  
Mechanical dough development method  
Liquid Brew

## 26. Bread Processing

Introduction  
Ingredient selection and formula balancing  
Mixing/Kneading  
Purpose  
Flying Ferment  
Process  
Importance  
Other Preparation  
Dough Temperature  
Mixing Process  
Hand Mixing  
Machine Mixing  
Slow speed mixing  
High speed mixing  
Spiral mixing  
Mixing Stages  
Mixing Time  
Flour Quality  
Bread Making Method  
Dough Temperature and Consistency  
Fat and Salt Quantity and Stage of its Addition  
Over or Under Mixed Dough  
Over Mixed Dough  
Under Mixed Dough  
Physical and Chemical Changes During Mixing  
Physical Changes

Chemical Changes  
Bulk fermentation  
Physico-chemical Reactions  
Under or Over Ferment Dough  
Under Ferment Dough  
Over Ferment Dough  
Knock back  
Dough make-up  
Scaling  
Rounding  
Intermediate Proofing  
Moulding  
Hand Moulding  
Machine Moulding  
Panning  
Tempering the Pan  
Greasing/Glazing the Pan  
Bread Pan  
Proofing  
Factor Affecting the Final Proof  
Temperature  
Relative Humidity  
Diastetic Activity of the Flour  
Fermentation  
Under or Over Proofing  
Over Proofing  
Under Proofing  
Baking  
Time and Temperature  
Physico-chemical Changes  
Oven Rise and Oven Spring  
Yeast Activity  
Enzyme Activity  
Starch Gelatinization  
Protein Denaturation  
Protein Coagulation  
Browning Reaction  
Oven Problems  
Insufficient Oven Heat  
Excessive Oven Heat  
Excess Steam  
Insufficient Steam  
Improper Heat Distribution  
Incorrect Pan Spacing  
Depanning  
Cooling  
Slicing  
Packing/Wrapping

## 27. Effluent Treatment

Introduction  
Dissolved oxygen concentration as an indicator of water quality  
Factory surveys

The strengths of fermentation effluents  
Treatment and disposal of effluents  
Disposal  
Seas and Rivers  
Lagoons  
Spray Irrigation  
Well Disposal  
Disposal of Effluents to Sewers  
Treatment processes  
Physical Treatment  
Chemical Treatment  
Biological Treatment  
Aerobic Processes  
Tricking Filters  
Towers  
Rotating Discs  
Rotating Drums  
Activated Sludge  
Anaerobic Treatment  
Anaerobic Digestion  
Anaerobic Filters  
By-products  
Distilleries  
Breweries  
Amino Acid Wastes

## About NIIR

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.
