

Enzymes Biotechnology Handbook

Author: NIIR Board of Consultants and Engineers

Format: Paperback

ISBN: 8178330784

Code: NI98

Pages: 490

Price: Rs. 1,100.00 **US\$** 29.73

Publisher: Asia Pacific Business Press Inc.

Usually ships within **5** days

Industrial biotechnology is the practice of using cells to generate industrially useful products. An enzyme is a protein that catalyzes, or speeds up, a chemical reaction. Enzymes are the focal point of biotechnological processes, without them biotechnology as a subject would not exist. The main advantage of enzymes compared to most other catalysts is their stereo, region and chemo selectivity and specificity. Enzymes are responsible for many essential biochemical reactions in micro organisms, plants, animals, and human beings. Biotechnology processes may have potential in energy production, specifically in the substitution of renewable plant biomass for fossil feedstock. This will depend on the development of enzymes able to degrade cellulose in plant biomass and designing methods to recycle or dispose of spent biomass. With time, research, and improved protein engineering methods, many enzymes have been genetically modified to be more effective at the desired temperatures, pH, or under other manufacturing conditions typically inhibitory to enzyme activity (e.g. harsh chemicals), making them more suitable and efficient for industrial or home applications. Enzymes are used in the extraction of natural products, as catalysts in organic chemistry, in clinical analysis, in industrial processes, and so on. The application of enzymes is found in many different fields and it is one of the good sectors to venture. In coming few years it is estimated that world enzyme demand will average annual increases of 6.3 percent.

This book basically deals with principles of industrial enzymology, basis of utilization of soluble and immobilized, enzymes in industrial processes, principles of immobilization of enzymes, enzymes in clinical analysis principles, practical aspects of large-scale protein purification, the applications of enzymes in industry, use of enzymes in the extraction of natural products, data on techniques of enzyme immobilization and bio affinity procedures etc.

In this book you can find all the basic information required on the fundamental aspects of the enzymes, their chemistry, bio chemistry as well as detailed information of their applications a wide variety of industrial processes etc. The book is very useful for research scholars, technocrats, institutional libraries and entrepreneurs who want to enter into the field of manufacturing of enzymes.

Contents

1. LARGE-SCALE EXTRACTION AND PURIFICATION OF ENZYMES AND OTHER PROTEINS

Extraction by Chemical Methods

Alkali

Lysozyme and EDTA

Detergents

Cold Shock

Osmotic Shock

Extraction by Physical Methods

Sonication
 Freezing and Thawing
 Solid Shear
 Grinding or Agitation with Abrasives
 Liquid Shear
 Isolation and Purification
 Nucleic Acid Removal
 Cetyltrimethyl Ammonium Bromide
 Streptomycin Sulphate
 Polyethyleneimine
 Nuclease Treatment
 Concentration by Precipitation
 Ammonium Sulphate
 Organic Solvents
 High Molecular Weight Polymers
 Concentration by Ultrafiltration
 Concentration by Freeze-Drying
 Gel Chromatography
 Ion Exchange Chromatography
 Ion Exchange Resins
 Ion Exchange Celluloses
 Other Ion Exchange Gels
 Affinity Chromatography
 Coupling Techniques
 Non-Specific Adsorbents
 Hydroxyapatite
 Celite
 Hydrophobic Interaction Chromatography
 High Performance Liquid Chromatography
 Electrophoretic Techniques
 Electrophoresis.
 Isoelectric Focusing
 Multimembrane Electrodecentration
 Chromatofocusing
 Aqueous Two-Phase Separation
 2. PRINCIPLES OF INDUSTRIAL ENZYMOLOGY: BASIS OF UTILIZATION OF SOLUBLE AND IMMOBILIZED ENZYMES IN INDUSTRIAL PROCESSES
 Glossary of Symbols
 Assay of Enzyme Activity
 Cofactors
 The Distinctive Features of Enzymes as Catalysts
 Enzyme Catalysis
 Enzyme Kinetics
 The Effect of pH on Enzyme Activity
 The Effect of Temperature on Enzyme Activity
 Enzyme Inhibition
 The Various Types of Enzymic Catalyst
 A Comparison of Enzymes with Chemical Catalysts
 A Comparison of Enzymes with Fermentations
 Immobilized Biocatalysts
 A Comparison of Immobilized Enzymes and Cells
 An Assessment of Immobilization Supports and Methods

Characterisation of Immobilized Biocatalysts
 Co-Immobilized Enzymes
 Two-Phase Reaction
 Industrial Enzyme Kinetic
 Effects on Equilibria
 Effectiveness Factors
 Steady - State Kinetics
 Intrinsic Activity of Enzymes - Modifying Factors
 Introduction
 Diffusional Limitations on the Activity of Immobilized Biocatalysts
 External Diffusional Limitations
 Internal Diffusional Restrictions
 Regeneration of Cofactors
 Biochemical Reactors
 Introduction
 The Various Types of Biochemical Reactor
 Assessment of the Performance of Biochemical Reactors
 Batch Reactors
 Continuous Stirred Tank Reactors
 Plug-flow Column Reactors (or Tubular Reactors)
 Fluidized Bed Reactors
 Electrochemical Reactors
 Ultrafiltration Reactors
 Enzyme Kinetic in Reactors
 Inhibition in Enzyme Reactors
 The Effect of Non-Ideal Flow on Biochemical Reactor Performance
 Physical Problems in Biochemical Reactor using Immobilized Biocatalysts
 Abrasion
 Compression
 Fouling
 Microbial Contamination
 The Stability of Immobilized Biocatalysts
 Introduction
 The Stability of Biochemical Reactors Employing Immobilized Enzymes or Immobilized Cells
 Regeneration of Biocatalyst Activities
 Constant Productivity with Biocatalyst Reactors
 Scale-Up
 Discussion
3. PRINCIPLES OF IMMOBILIZATION OF ENZYMES
 Classification of Immobilized Enzymes
 Techniques of Enzyme Immobilization
 Entrapment
 Gel Entrapment
 Fibre Entrapment
 Micro-encapsulation
 Carrier Binding
 Physical Adsorption
 Ionic Binding Method
 Chelation or Metal Binding

- Covalent Binding
- Crosslinking
- Immobilized Soluble Enzymes
- Immobilization without Enzyme Derivatization
- Immobilization with Enzyme Derivatization
- Miscellaneous Methods
- Choice of Immobilization Method
- Outline of Properties of Immobilized Enzymes
- Stability
- Kinetic Properties
- Outline of Enzyme Reactors
- Batch Reactors
- Continuous Reactors
- Application and Future Trends
- Analytical Applications
- Enzyme Electrodes
- Automated Analysis
- Therapeutic Applications
- Enzyme Replacement
- Enzyme Therapy
- Industrial Applications
- Future Trends
- 4. ENZYMES IN CLINICAL ANALYSIS - PRINCIPLES
- Measurement of Substrate Concentration with Enzymes
- Principles of Equilibrium Methods
- Principles of Kinetic Methods
- Comparison of Equilibrium and Kinetic Methods
- Common Indicator Species Used in Routine Clinical Analysis
- Nicotinamide Adenine Dinucleotides
- Oxygen and Hydrogen Peroxide
- Measurement of Enzymes
- Principles of Enzyme Assay Using Coupled Enzymes
- Immobilized Enzymes for Measuring Substrate Concentrations
- Immobilized Enzyme Reactor Tubes
- Bioanalytical Probes
- Dry Reagent Chemistry
- Enzyme Immunoassay (ELA)
- Preparation of Enzyme Labels
- Homogeneous EIA
- Heterogeneous EIA
- Choice of Enzyme Label
- Assay in EIA
- Simultaneous Assay of Two Haptens
- The Future
- 5. PRACTICAL ASPECTS OF LARGE-SCALE PROTEIN PURIFICATION
- Enzyme Inactivation
- Containers and Ancillary Equipment
- Glass Vessels
- Metal Vessels
- Plastic Vessels
- Liquid Transfer

- Couplings
- Pumps
- Bacterial Disruption
- Resuspension
- Liquid Shear
- Grinding
- Centrifugation
- Batch Centrifuges
- Continuous Flow Centrifuges
- Disc Type Centrifuge
- Hollow Bowl Centrifuges
- Basket Centrifuges
- Tangential Flow Filtration
- Concentration
- Ultrafiltration
- Stirred Cells
- Thin Channel Systems
- Cartridge Membranes
- Hollow Fibres
- Dialysis
- Chromatography
- 1 Columns
- Gel Chromatography
- Ion Exchange Chromatography
- Affinity Chromatography
- 6. THE APPLICATIONS OF ENZYMES IN INDUSTRY
- Glossary of Terms
- Production of Enzymes
- Use of Enzyme - General Comments
- The Characteristics of Industrial Enzymes
- Sources of Enzymes
- The Isolation, Purification and Formulation of Enzymes
- Legislation on the Use of Enzymes
- Enzyme Manufacturers
- Biochemical Applications
- Use of Enzymes in Analysis
- General
- In Clinical Assays
- Medical Uses of Enzymes
- The Use of Enzymes as Catalysts in Organic Chemistry
- Introduction
- Stereospecificity of Enzymes
- Prochiral Stereospecificity
- Combinations of Stereospecificity
- Multiple-Step Reactions
- Synthesis of Radioactive Compounds
- Restriction Endonucleases
- Biochemical Processing
- Applications of Enzymes in the Food Industry
- Polysaccharide Processing
- Bacterial α -amylase
- Amyglucosidase (EC 3.2.1.3)
- Maltose Syrups

Glucose Isomerase (EC 53.1.5)
 Inversion of Sucrose
 Sugar Refining
 Raffinase
 α-amylase
 Dextranase (EC3.2.1.11)
 Debranching Enzymes
 Cyclodextrin Glucosyltransferase and Other Amylases
 Cellulase (EC3.2.1.4)
 Ethanol Fermentation
 Brewing
 Baking
 The Dairy Industry
 Lactose Hydrolysis
 Cheese Manufacture
 Coagulation
 Flavour Development
 Other Applications
 Organic Acids
 Amino Acids
 Introduction
 Enzymic Resolution
 Enzymic Production of Amino Acids
 Antioxidant
 Introduction
 Glucose Oxidase (EC 1.1.3.4)
 Protein Processing
 Introduction
 The Plastein Reaction
 Aspartame
 Others
 Flavouring Agents
 Fruit Processing
 Use of Enzymes in the Extraction of Natural Products
 Detoxifying Enzymes
 Enzyme-Based Detergents
 Use of Enzymes as Cleansing Agents
 The Leather Industry
 Textiles
 Paper Manufacture
 Antibiotics
 Penicillin Acylase, (EC 3.5.1.11)
 Cephalosporins
 Miscellaneous uses of Biocatalysts
 Conclusion
 Note in Proff
 Acrylamide
 Propylene Oxide
 Vinyl Chloride
 Biosensors
 Amino Acids
 7. DATA ON TECHNIQUES OF ENZYME IMMOBILIZATION
 AND BIOAFFINITY PROCEDURES

Entrapment
 Gel Entrapment
 Fibre Entrapment
 Microencapsulation
 Phase Separation Method
 Interfacial Polymerization Method
 Liquid Surfactant Membrane Method
 Liquid Drying Method
 Chelation or Metal Binding
 Covalent Binding
 Diazotization
 Amide Bond Formation
 Acid Anhydride Derivatives
 Acylazide Derivatives
 Cyclic Imidocarbonate Derivatives
 Isocyanate and Isothiocyanate Derivatives
 Acyl Chloride Derivatives
 Cyclic Carbonate Derivatives
 Condensing Reagents
 Alkylation and Arylation
 Schiff's Base Formation
 Ugi Reaction
 Amidation Reactions
 Thiol-Disulphide Interchange
 Mercury-Enzyme Interactions
 -Irradiation Induced Coupling
 Matrices for Carrier Binding
 Inorganic Supports
 Controlled Pore Supports
 Other Porous Supports
 Non-porous supports
 Coupling Reactions for Inorganic Supports
 Organic Supports
 Polysaccharides
 Proteins
 Carbon
 Polystyrenes
 Polyacrylates
 Maleic Anhydride Based Copolymers
 Polypeptides
 Vinyl and Allyl Polymers
 Polyamides
 Crosslinking
 Immobilized Cells
 Entrapment
 Physical Adsorption
 Chelation or Metal Binding
 Covalent Binding
 Crosslinking
 Other Immobilized Biologically Active Molecules
 Immunoabsorbents
 Affinity Chromatography Media
 Immobilized Lectins

Immobilized Amino Acids and Peptides
Immobilized Carbohydrates
Immobilized Nucleosides, Nucleotides and Nucleic Acids
Immobilized Antibiotics
8. ENZYMES IN CLINICAL ANALYSES - DATA
Substrates Measured Enzymically in Clinical Laboratories
Enzymes Measured by Coupled Enzyme System in
Clinical Laboratories
Immobilized Enzymes for Measuring Substrates
Enzymes Used in Enzyme Immunoassay (EIA)

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.

NIIR PROJECT CONSULTANCY SERVICES , 106-E, Kamla Nagar, New Delhi-110007, India. **Email:** npcs.india@gmail.com **Website:** NIIR.org
