

# Enzymes Biotechnology Handbook

**Author:** NIIR Board of Consultants and Engineers

**Format:** Paperback

**ISBN:** 8178330784

**Code:** NI98

**Pages:** 490

**Price:** Rs. 1,100.00 US\$ 125.00

**Publisher:** Asia Pacific Business Press Inc.

Usually ships within **3** days

Industrial biotechnology is the practice of using cells to generate industrially useful products. An enzyme is a protein that catalyzes, or speeds up, a chemical reaction. Enzymes are the focal point of biotechnological processes, without them biotechnology as a subject would not exist. The main advantage of enzymes compared to most other catalysts is their stereo, region and chemo selectivity and specificity. Enzymes are responsible for many essential biochemical reactions in micro organisms, plants, animals, and human beings. Biotechnology processes may have potential in energy production, specifically in the substitution of renewable plant biomass for fossil feedstock. This will depend on the development of enzymes able to degrade cellulose in plant biomass and designing methods to recycle or dispose of spent biomass. With time, research, and improved protein engineering methods, many enzymes have been genetically modified to be more effective at the desired temperatures, pH, or under other manufacturing conditions typically inhibitory to enzyme activity (e.g. harsh chemicals), making them more suitable and efficient for industrial or home applications. Enzymes are used in the extraction of natural products, as catalysts in organic chemistry, in clinical analysis, in industrial processes, and so on. The application of enzymes is found in many different fields and it is one of the good sectors to venture. In coming few years it is estimated that world enzyme demand will average annual increases of 6.3 percent.

This book basically deals with principles of industrial enzymology, basis of utilization of soluble and immobilized, enzymes in industrial processes, principles of immobilization of enzymes, enzymes in clinical analysis principles, practical aspects of large-scale protein purification, the applications of enzymes in industry, use of enzymes in the extraction of natural products, data on techniques of enzyme immobilization and bio affinity procedures etc.

In this book you can find all the basic information required on the fundamental aspects of the enzymes, their chemistry, bio chemistry as well as detailed information of their applications a wide variety of industrial processes etc. The book is very useful for research scholars, technocrats, institutional libraries and entrepreneurs who want to enter into the field of manufacturing of enzymes.

## Contents

### 1. LARGE-SCALE EXTRACTION AND PURIFICATION OF ENZYMES AND OTHER PROTEINS

Extraction by Chemical Methods

Alkali

Lysozyme and EDTA

Detergents

Cold Shock

Osmotic Shock

Extraction by Physical Methods

Sonication  
Freezing and Thawing  
Solid Shear  
Grinding or Agitation with Abrasives  
Liquid Shear  
Isolation and Purification  
Nucleic Acid Removal  
Cetyltrimethyl Ammonium Bromide  
Streptomycin Sulphate  
Polyethyleneimine  
Nuclease Treatment  
Concentration by Precipitation  
Ammonium Sulphate  
Organic Solvents  
High Molecular Weight Polymers  
Concentration by Ultrafiltration  
Concentration by Freeze-Drying  
Gel Chromatography  
Ion Exchange Chromatography  
Ion Exchange Resins  
Ion Exchange Celluloses  
Other Ion Exchange Gels  
Affinity Chromatography  
Coupling Techniques  
Non-Specific Adsorbents  
Hydroxyapatite  
Celite  
Hydrophobic Interaction Chromatography  
High Performance Liquid Chromatography  
Electrophoretic Techniques  
Electrophoresis.  
Isoelectric Focusing  
Multimembrane Electrodecentration  
Chromatofocusing  
Aqueous Two-Phase Separation  
2. PRINCIPLES OF INDUSTRIAL ENZYMOLOGY: BASIS OF UTILIZATION OF SOLUBLE AND IMMOBILIZED ENZYMES IN INDUSTRIAL PROCESSES  
Glossary of Symbols  
Assay of Enzyme Activity  
Cofactors  
The Distinctive Features of Enzymes as Catalysts  
Enzyme Catalysis  
Enzyme Kinetics  
The Effect of pH on Enzyme Activity  
The Effect of Temperature on Enzyme Activity  
Enzyme Inhibition  
The Various Types of Enzymic Catalyst  
A Comparison of Enzymes with Chemical Catalysts  
A Comparison of Enzymes with Fermentations  
Immobilized Biocatalysts  
A Comparison of Immobilized Enzymes and Cells  
An Assessment of Immobilization Supports and Methods

Characterisation of Immobilized Biocatalysts  
Co-Immobilized Enzymes  
Two-Phase Reaction  
Industrial Enzyme Kinetic  
Effects on Equilibria  
Effectiveness Factors  
Steady - State Kinetics  
Intrinsic Activity of Enzymes - Modifying Factors  
Introduction  
Diffusional Limitations on the Activity of Immobilized Biocatalysts  
External Diffusional Limitations  
Internal Diffusional Restrictions  
Regeneration of Cofactors  
Biochemical Reactors  
Introduction  
The Various Types of Biochemical Reactor  
Assessment of the Performance of Biochemical Reactors  
Batch Reactors  
Continuous Stirred Tank Reactors  
Plug-flow Column Reactors (or Tubular Reactors)  
Fluidized Bed Reactors  
Electrochemical Reactors  
Ultrafiltration Reactors  
Enzyme Kinetic in Reactors  
Inhibition in Enzyme Reactors  
The Effect of Non-Ideal Flow on Biochemical Reactor Performance  
Physical Problems in Biochemical Reactor using Immobilized Biocatalysts  
Abrasion  
Compression  
Fouling  
Microbial Contamination  
The Stability of Immobilized Biocatalysts  
Introduction  
The Stability of Biochemical Reactors Employing Immobilized Enzymes or Immobilized Cells  
Regeneration of Biocatalyst Activities  
Constant Productivity with Biocatalyst Reactors  
Scale-Up  
Discussion  
3. PRINCIPLES OF IMMOBILIZATION OF ENZYMES  
Classification of Immobilized Enzymes  
Techniques of Enzyme Immobilization  
Entrapment  
Gel Entrapment  
Fibre Entrapment  
Micro-encapsulation  
Carrier Binding  
Physical Adsorption  
Ionic Binding Method  
Chelation or Metal Binding

Covalent Binding  
Crosslinking  
Immobilized Soluble Enzymes  
Immobilization without Enzyme Derivatization  
Immobilization with Enzyme Derivatization  
Miscellaneous Methods  
Choice of Immobilization Method  
Outline of Properties of Immobilized Enzymes  
Stability  
Kinetic Properties  
Outline of Enzyme Reactors  
Batch Reactors  
Continuous Reactors  
Application and Future Trends  
Analytical Applications  
Enzyme Electrodes  
Automated Analysis  
Therapeutic Applications  
Enzyme Replacement  
Enzyme Therapy  
Industrial Applications  
Future Trends

**4. ENZYMES IN CLINICAL ANALYSIS - PRINCIPLES**  
Measurement of Substrate Concentration with Enzymes  
Principles of Equilibrium Methods  
Principles of Kinetic Methods  
Comparison of Equilibrium and Kinetic Methods  
Common Indicator Species Used in Routine Clinical Analysis  
Nicotinamide Adenine Dinucleotides  
Oxygen and Hydrogen Peroxide  
Measurement of Enzymes  
Principles of Enzyme Assay Using Coupled Enzymes  
Immobilized Enzymes for Measuring Substrate Concentrations  
Immobilized Enzyme Reactor Tubes  
Bioanalytical Probes  
Dry Reagent Chemistry  
Enzyme Immunoassay (ELA)  
Preparation of Enzyme Labels  
Homogeneous EIA  
Heterogeneous EIA  
Choice of Enzyme Label  
Assay in EIA  
Simultaneous Assay of Two Haptens  
The Future

**5. PRACTICAL ASPECTS OF LARGE-SCALE PROTEIN PURIFICATION**  
Enzyme Inactivation  
Containers and Ancillary Equipment  
Glass Vessels  
Metal Vessels  
Plastic Vessels  
Liquid Transfer

Couplings  
Pumps  
Bacterial Disruption  
Resuspension  
Liquid Shear  
Grinding  
Centrifugation  
Batch Centrifuges  
Continuous Flow Centrifuges  
Disc Type Centrifuge  
Hollow Bowl Centrifuges  
Basket Centrifuges  
Tangential Flow Filtration  
Concentration  
Ultrafiltration  
Stirred Cells  
Thin Channel Systems  
Cartridge Membranes  
Hollow Fibres  
Dialysis  
Chromatography  
1 Columns  
Gel Chromatography  
Ion Exchange Chromatography  
Affinity Chromatography  
6. THE APPLICATIONS OF ENZYMES IN INDUSTRY  
Glossary of Terms  
Production of Enzymes  
Use of Enzyme - General Comments  
The Characteristics of Industrial Enzymes  
Sources of Enzymes  
The Isolation, Purification and Formulation of Enzymes  
Legislation on the Use of Enzymes  
Enzyme Manufacturers  
Biochemical Applications  
Use of Enzymes in Analysis  
General  
In Clinical Assays  
Medical Uses of Enzymes  
The Use of Enzymes as Catalysts in Organic Chemistry  
Introduction  
Stereospecificity of Enzymes  
Prochiral Stereospecificity  
Combinations of Stereospecificity  
Multiple-Step Reactions  
Synthesis of Radioactive Compounds  
Restriction Endonucleases  
Biochemical Processing  
Applications of Enzymes in the Food Industry  
Polysaccharide Processing  
Bacterial -amylase  
Amyglucosidase (EC 3.2.1.3)  
Maltose Syrups

Glucose Isomerase (EC 53.1.5)  
Inversion of Sucrose  
Sugar Refining  
Raffinase  
α-amylase  
Dextranase (EC3.2.1.11)  
Debranching Enzymes  
Cyclodextrin Glucosyltransferase and Other Amylases  
Cellulase (EC3.2.1.4)  
Ethanol Fermentation  
Brewing  
Baking  
The Dairy Industry  
Lactose Hydrolysis  
Cheese Manufacture  
Coagulation  
Flavour Development  
Other Applications  
Organic Acids  
Amino Acids  
Introduction  
Enzymic Resolution  
Enzymic Production of Amino Acids  
Antioxidant  
Introduction  
Glucose Oxidase (EC 1.1.3.4)  
Protein Processing  
Introduction  
The Plastein Reaction  
Aspartame  
Others  
Flavouring Agents  
Fruit Processing  
Use of Enzymes in the Extraction of Natural Products  
Detoxifying Enzymes  
Enzyme-Based Detergents  
Use of Enzymes as Cleansing Agents  
The Leather Industry  
Textiles  
Paper Manufacture  
Antibiotics  
Penicillin Acylase, (EC 3.5.1.11)  
Cephalosporins  
Miscellaneous uses of Biocatalysts  
Conclusion  
Note in Proff  
Acrylamide  
Propylene Oxide  
Vinyl Chloride  
Biosensors  
Amino Acids  
**7. DATA ON TECHNIQUES OF ENZYME IMMOBILIZATION  
AND BIOAFFINITY PROCEDURES**

Entrapment  
Gel Entrapment  
Fibre Entrapment  
Microencapsulation  
Phase Separation Method  
Interfacial Polymerization Method  
Liquid Surfactant Membrane Method  
Liquid Drying Method  
Chelation or Metal Binding  
Covalent Binding  
Diazotization  
Amide Bond Formation  
Acid Anhydride Derivatives  
Acylazide Derivatives  
Cyclic Imidocarbonate Derivatives  
Isocyanate and Isothiocyanate Derivatives  
Acyl Chloride Derivatives  
Cyclic Carbonate Derivatives  
Condensing Reagents  
Alkylation and Arylation  
Schiff's Base Formation  
Ugi Reaction  
Amidination Reactions  
Thiol-Disulphide Interchange  
Mercury-Enzyme Interactions  
-Irradiation Induced Coupling  
Matrices for Carrier Binding  
Inorganic Supports  
Controlled Pore Supports  
Other Porous Supports  
Non-porous supports  
Coupling Reactions for Inorganic Supports  
Organic Supports  
Polysaccharides  
Proteins  
Carbon  
Polystyrenes  
Polyacrylates  
Maleic Anhydride Based Copolymers  
Polypeptides  
Vinyl and Allyl Polymers  
Polyamides  
Crosslinking  
Immobilized Cells  
Entrapment  
Physical Adsorption  
Chelation or Metal Binding  
Covalent Binding  
Crosslinking  
Other Immobilized Biologically Active Molecules  
Immunoabsorbents  
Affinity Chromatography Media  
Immobilized Lectins

Immobilized Amino Acids and Peptides  
Immobilized Carbohydrates  
Immobilized Nucleosides, Nucleotides and Nucleic Acids  
Immobilized Antibiotics  
8. ENZYMES IN CLINICAL ANALYSES - DATA  
Substrates Measured Enzymically in Clinical Laboratories  
Enzymes Measured by Coupled Enzyme System in  
Clinical Laboratories  
Immobilized Enzymes for Measuring Substrates  
Enzymes Used in Enzyme Immunoassay (EIA)

## About NIIR

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.
